

# Nationwide saga: take-off bid before the court

ANOTHER chapter in the saga of attempts by Nationwide Air to secure its inter-island car ferry operation unfolds today—this time in the Supreme Court.

Nationwide Air Akarana and Air North are seeking a court review of an Air Services Licensing Authority decision almost two years ago.

That decision disallowed the then Akarana Air and Air North to substitute aircraft on their air services licenses, and it began the long series of difficulties for the various companies grouped around controversial transport entrepreneur Matt Thompson.

The Supreme Court case is almost the last legal recourse that Nationwide's endeavours have open.

And the day that the file on Nationwide is closed will bring sighs of relief in the transport sector—and not just to those in official quarters.

Air North and Akarana Air were struggling third-level airlines operating in the

central North Island.

They were largely bought out by the Haulways Corporation, which wanted to use them as a means of running a complete inter-island car ferry system.

The name was changed to Nationwide Air, which was to ferry cars on behalf of another component of the Haulways Corporation, the then Car Haulways Ltd, now known as Nationwide Transport Autos, which is in receivership.

Two Carvair aircraft suitable for a car ferry operation were imported and put on the two companies' licenses in place of two small passenger aircraft.

The fun started when the Air Services Licensing Authority declined to register the substitutions.

Under the authority's standard conditions—its standing orders and regulations—substitution of aircraft of comparable seating capacity could be made without a public hearing and objections procedure.

Nationwide claims that, because the Carvair seated roughly the same as the aircraft for which they were substituted, the process was legal.

But the authority, midway through this process, changed its standard conditions so that a substitution could be made only if the freight capacity of the aircraft involved was also comparable.

Nationwide alleges this change was prompted by a desire to frustrate its efforts and by malice on the part of the authority, and that the authority was acting outside its powers, and without just cause.

Today's Supreme Court action is for a review of that decision, made more than 18 months ago.

Nationwide appealed also to the Air Services Licensing Appeal Authority. That case is still to be heard.

Nationwide Air, the new holding company for the air operation, began operating with its Carvairs after another

complex series of legal manoeuvres and financial manipulations involving Arab money, and a dispute over ownership of the aircraft. Air North went into receivership in December 1978 and in March this year the authority took away from Air North its right to operate its former routes, giving them instead to the Mount Cook Group.

Nationwide Air Akarana also went into receivership and is now in liquidation.

The affair was made more complex with the various components of the Haulways Corporation also having receivers appointed. And from that emerged a new entity—Nationwide Air International.

This company flew the same Carvair aircraft for four months from late December 1978 to April 1979 before it too went into receivership.

Debts disclosed to an authority hearing earlier this month amount to nearly \$250,000.

Nationwide Air International is the holding

company for the new operation and was the applicant for the air services licence heard by the authority in October.

But the authority was told the actual operator was a wholly owned subsidiary of that company, Nationwide Freight 1978 Ltd.

Counsel and Nationwide Air International Director John Rutherford told the authority the service run earlier this year was on Akarana licenses.

Just how they came to belong to the new company was not disclosed nor could the authority find evidence in the accounts presented of assets and liabilities of the Akarana operation—now in liquidation.

Two attempts have been made this year to secure an air services licence for the car ferry operation. The first, made in an effort to clarify the legal position of the licensee, foundered when the authority declined to hear the full application on the grounds that the company had no fuel supply and under the Government's fuel conservation policy was not entitled to an allocation.

The second, heard earlier this month, went ahead on the basis that the company would show it had its own fuel supply.

After the company

presented its case, Air North Zealand successfully moved for the application to be dismissed.

The authority held to an earlier view that "the present government policy on air supplies" prevented the grant of a new air services licence to a company of freight.

It added: "We do not see that it is in the public interest that a company, which is now insolvent and has no money in four months, should vary its sub-subsidiary with a substantial current liability which it is unable to meet, should be assisted by a trading without having a satisfactory financial position."

Part of the argument was that concerned the subsidies included in the license sale rebates—belonging to Akarana Air, which Thompson and Rutherford claimed was part of the new Nationwide Air International.

This goes to the heart of the argument about the subsidies which licenses and also various liabilities and should be distributed as parts of the Haulways Corporation and its related companies.

## Faltering fortunes chip away Tasman's blue ribbon status

TASMAN Pulp and Paper, regarded by many as a blue-ribbon firm, is in for more rough times.

Industrial troubles, liquidity crises, and major managerial and financial reconstruction are all in the past, and many investors will be looking to the company for long term growth.

But increases in the price of the company's raw material are inevitable, and land problems will complicate Tasman's future.

The Forest Service signed a 25-year contract in 1965 with the right of renewal for a further 50 years to supply Tasman with standing trees at \$0.35 a cubic metre. Subsequent sales have lifted this price to an average \$1.08 a cubic metre.

The effect of the new price for wood could make Tasman's recent troubles look of minor importance.

The original contract in-

cluded no allowance for inflation—\$1.08 a cubic metre in 1955 values is still being paid as \$1.08 in 1979.

Because of inflation, the current price is less than 30 per cent of that originally received in 1955.

The price Tasman pays for standing timber today is only about 1.3 per cent of its sales revenue.

The Government's policy of making trading departments, such as the Forest Service, at least cover their costs must be causing jitters in the Tasman boardroom.

Because of the period between planting and felling in forestry, the interest rate is critical.

Even at a modest 10 per cent, a 1977 King Country study showed a break-even cost of growing radiata pine of about \$15 per cubic metre.

With an annual consumption of 1.8 million cubic metres, Tasman faces a wood pur-

chase price increase of more than \$25 million per year.

The Forest Service no doubt will be taking a hard line in negotiations, as it can expect trouble with all other sales if the principle of covering costs is not met.

Negotiations are still taking place, and the Forest Service has declined to comment.

The Tasman sale is by far the largest the Forest Service has and includes further sales in excess of \$60 million.

These, in effect, will set a precedent for future sales arising from the planting boom of the late 1960s.

The basis for this forest investment was a series of financial reports showing forestry to give a return on capital of 10-12 per cent.

The Forest Service has had no hesitation in using these figures to impress Treasury officials, and to urge against agriculturally oriented local governments wishing to

make forestry a conditional land use.

Other forest growers, such as farm foresters, will be watching the outcome of the negotiations with close interest.

A large sale which recognises true costs would have a stimulating effect on forest investment throughout the country.

Sawnmillers will also be avoiding the outcome.

Although only about 20 per cent of round wood purchased by Tasman is sawn, 80 per cent of this sawn timber is sold within New Zealand.

Smaller sawmillers who have been paying far more for their logs but must compete with Tasman on the local market, obviously will be expecting similar subsidies if Tasman obtains its sawlogs at less than the cost of growing them.

Unlike the present sale, the new agreement no doubt will differentiate between pulp logs and sawlogs.

To maintain the overall price of \$15 a cubic metre, for each \$1 a cubic metre that pulpwood is priced below this level, sawlogs will have to be

Victoria University of Wellington offers Special Programmes for Graduates and Experienced Non-Graduates wishing to gain additional skills and knowledge

### DIPLOMA in ACCOUNTING

Graduates in Arts, Science, Law or Commerce (other than commerce majors) can enter the major components of the commerce examinations for entry to the accounting profession. The course covers 12 months of full-time study or 24 months of part-time study. Financial support could be available to selected students.

Course Supervisor: Professor D.G. To

### DIPLOMA in BUSINESS ADMINISTRATION

This two or three year programme of part-time study incorporates the:

- Certificate in Personnel Administration
- Certificate in Marketing
- Certificate in Operations Management

These courses are designed for people with at least three years of work experience and management potential who may not have tertiary qualifications or may have had university education in non-business subjects. We are offering to these people the opportunity to receive part-time university-level education (late afternoon/evening) in their specific area of choice. Students who have attended a university before must apply by 15 December 1979; other students must apply by 15 January 1980.

Course Supervisor: D. Giblin

### CERTIFICATE and DIPLOMA in INDUSTRIAL RELATIONS

Courses are oriented towards the practitioner and the teacher, and provide for intensive study of both the practice and theory of industrial relations. In 1980 the Industrial Relations Centre will offer the Certificate course in three two-week modules of full-time study. The Diploma course, for which the Certificate is a prerequisite, will be offered in two modules in 1981. Applications for admission should be made by November 30, 1980.

Course Supervisor: Professor F.J.L. Young

**DIPLOMA in OPERATIONS RESEARCH and STATISTICS**  
This course, offered by the Institute of Statistics and Operations Research, is designed to prepare graduates for professional work in the combined areas of operations research and statistical techniques. Students take a combination of courses in the two subjects over one year of full-time or two years of part-time study.

Course Supervisors: Professor D. Vere-Jones, Professor G.A. Vignani

Write now to the appropriate Course Supervisor for further information, or phone the Supervisor at Wellington 721 0000. Any persons wishing to enrol in 1980 must obtain a pre-enrolment form from the undersigned and return it to the University by 15 January 1980.

W.E. Harvey, Registrar, Victoria University of Wellington, Private Bag, Wellington.

## Paper lags behind publishers' demands

by Belinda Gillespie

NEWSPAPER publishers face a serious newsprint supply situation.

All newspapers hold contracts with Tasman Pulp and Paper for newsprint and the company is currently up to 10 weeks behind with deliveries to North Island publishers.

There have been accusations within the industry that Tasman is giving higher priority to its export commitments than to local supplies.

The Newspaper Publishers Association says that it "recognises the advantages of Tasman's export potential", but stresses that guaranteed sales to New Zealand publishers were the basis of the company getting off the ground in the first place.

Despite the export drive, the local market—especially as a large employer—shouldn't be disadvantaged because of export commitments, the association said.

Not all Tasman's export business is on a contract basis, the association points out. A relatively small adjustment to the company's export supply policy would bring New Zealand publishers up to date.

A single cut-back to Tasman's non-contract customers, according to the association, would be enough for Tasman to catch up with its orders.

Shortages have been chronic for some time, reaching a peak after the industrial stoppages at Kawerau last year, when local publishers had to import 7000 tonnes of high-priced newsprint.

The shortages have been the subject of constant representations

from newspaper publishers to Tasman.

Tasman spokesman Gary Mace denied that overseas customers got higher priority. While admitting supply difficulties, he said that these were spread "equitably" around all customers.

All Tasman's overseas sales are on contract, said Mace. While some manufacturers on the world market supplied paper on a "spot" basis, allowing them greater flexibility, this is not the case with Tasman.

Mace doubted the whether the NPA's claim of a 10 week lag in deliveries was correct. But he said that Tasman had "long since explained" to publishers that the company expected to be up to seven weeks behind in deliveries.

This was still partly as a result of last year's strike and partly due to further industrial trouble earlier this year.

With the mill operating on a 24 hour a day basis, Mace said a "hiccup" in production was virtually irreparable, and he could see no prospect of making up the lag now or in the foreseeable future.

Although dismissing the suggestion that the company could improve the situation for local publishers by making a single cut to non-contract export buyers, Mace admitted that there were instances where Tasman could approach publishers to get them to negotiate another source of supply.

The company is, in fact, withdrawing from two small export markets next year, which could alleviate the local situation.

"The shortage is an international one," Mace said, "it would

be nice to ask the Australians to buy from Canada for a while, but the supply just isn't there."

While appreciating the publishers' problems, Mace said, Tasman had given them plenty of warning of the expected permanence of the problem of being seven weeks behind.

He said the figure is a national average. South Island publishers are generally kept more up to date because of their greater vulnerability to transport disruptions.

Although there is "no quick way out" of the problem, Tasman has been trying to buy newsprint overseas on behalf of publishers, he said. But so far all attempts to negotiate sales—up to one as recent as October 31 with this Japanese—had failed.

Another bone of contention between Tasman and the NPA is the price of newsprint. The company's annual report described the "inequity of the pricing clause in the newsprint supply contract entered into in 1968" with the NPA.

While the publishers point out that they voluntarily broke the contract several years back, and now pay well above the negotiated price, Tasman claims that the New Zealand price still doesn't reflect what newsprint fetches internationally.

The last increase of \$25 per tonne was negotiated in July, and further increases are in the pipeline. But the continuing small increases don't lessen the gap, according to Mace, and the problem will be a continuing one until the contract is renegotiated in 1983.

# Gair: turning a political pose into practice

by Colin James

JOURNALISTS take a sceptical view of public relations operators. PR people have a slick way of sliding round uncomfortable truths.

It is therefore not surprising that a PR man who turns politician tends to get thought a lightweight.

So it was with George Gair. I was not alone in once doubting that there was substance behind the Gair charm.

I have changed my mind. I think there is substance: courage; and a gritty and intelligent administrative style.

When the abortion debate raged, Gair was the leading "liberal" MP, defying both the personal and the prima ministerial power of his leader and the feared vote-pulling power of SPUC that was undermining the confidence of other MPs.

That politically uncomfortable stand showed an inner strength which the Prime Minister, who can be a shrewd judge of character, appears to have recognised in consigning him to the graveyard portfolios of health and social welfare.

Many thought at the time that the Prime Minister was sidelining a potential rival. But this does not entirely fit the facts.

Three years earlier he had picked Gair to head the Cabinet expenditure cuts committee.

Eighteen months later he put him into energy, where things had gone sour. Gair improved relations with the oil explorers, got some sort of long-range planning and debate going, made the critical decision to use Maui gas for liquid fuels and did the groundwork on administrative restructuring which made it easier for his successors to take his exciting decisions this year.

Having done the worst of the clean-up job at energy, he was a logical choice to tackle what the party considers to be the Aegean states of health and social welfare, the big spenders.

At the same time the Prime Minister—who holds, I think genuinely, a brief for the underdog—would have been well aware of Gair's involvement in the anti-natal stages of both accident compensation and national superannuation. Thus some balance.

There was once an adage that ministers of whatever political colour made their reputations in spending portfolios by defending their departments' budgets and grabbing more—es present-day cutter Margaret Thatcher did in education in Edward Heath's Cabinet.

Times have changed. The economy can no longer support social spending rising faster than the gross national product. And the old choruses from the party and others against layabouts on welfare and the burden of the state on the ordinary citizen have become louder and more insistent.

The accent is on cutting, not expanding. Thus, to some extent, a would-be cutter's job has been made easier than it might have been.

But health and social services are emotive areas. Interference inevitably entails public abuse, tear-jerking television scenes and accusations of heartlessness.

Having been a PR of sorts myself for a while—though, of course, in the very best of causes—I speak with authority on both sides of the fence.

POLITICS

This may explain why between 1975 and 1978, when other spending was being squeezed, these fields largely escaped the axe. Health increased its share of the GNP and national superannuation came in.

Gair's job has been to reverse this. In health he has cut 1 per cent off the top of hospital board spending, thus reducing the rate of increase and forcing some painful decisions on boards.

He has made a start on trimming the runaway pharmaceutical bill by making low-power tranquillisers harder to get and persuading those involved in prescribing, making, distributing and dispensing drugs to look at ways of cutting the total cost.

The picture in benefit spending is less clear. Gair has cut \$114 million off National's sacred cow, national superannuation, "restructured" additional benefits at a cost to beneficiaries of \$9 million out of \$27 million, reduced time limits on benefits to travellers overseas (\$10 million savings) and taxed unemployment benefits.

On the other hand he has doubled the family benefit, increased other child benefits and raised married women's unemployment benefits to the full rate.

This increases roughly offset the cuts, the biggest redistribution being from old people to families with young children.

But the family benefit rise is probably more accurately regarded as a tax measure than a benefit change, tying in with the Prime Minister's professed determination to help the one-income, low-income family.

Viewed in that light, Gair's part in the rearrangement of benefit spending might be considered to have been a cutting exercise—and painful at that.

It is probably fair to say that Gair is making a start on turning social welfare spending trends round.

I am not concerned here with the rightness or wrongness of Gair's moves.

The point is that the Government—and the National Party—has long said it believes in holding down state spending while actually presiding over increases.

Gair has turned a political pose into administrative practice.

He has been helped by his PR ability.

On television explaining his actions, he does not come across as an unfeeling ogre (which he is not) but as a reasonable man working out priorities.

It seems to be working on the hospital boards, too. He delightedly cites one board member who says the administrators now argue priorities with the medical experts who once went unchallenged—in other words, entrenched attitudes and patterns are being dented.

He has approached the task with intelligence, rationalising rather than simply axing—

though observers question whether he is yet weighing adequately the merits of new programmes against old.

He has also set the moves against a politico-philosophical base: the encouragement of self-reliance. He quotes Abraham Lincoln: "You cannot help men permanently by doing for them what they could and should do for themselves." Gair adds that if the state does too much it may make people totally dependent on the state.

To a people brought up on 40 years of the welfare state, what Gair wants requires a fundamental change in an attitude which even among businessmen and farmers has often instinctively leaned more toward state support or protection than self-reliance.

Gair says he is trying to change attitudes. But doing so is a long business.

Thus, if some of the focus of support for non-copers is to be shifted from the state, it will imply greater responsibilities among the able-bodied in the meantime.

For example, if companies are going eventually to save tax money through a reduction of Government social spending—or, as Gair puts it, finding a balance between doing too much and doing too little—they will by implication have a corresponding obligation to support (perhaps more efficient) voluntary programmes, particularly preventive programmes that help stop potential non-copers or non-conformers becoming a charge on the state.

Taka as an example the YMCAs. They are developing programmes designed to help young people having trouble fitting into the community—an essentially social welfare function even if the organisations' Government money has hitherto largely come through the Internal Affairs Department.

The principle behind these programmes is simple: it costs more to keep these people in borstal or prison than to integrate them before they go off the rails.

The illustration the YMCAs themselves use is the Rydum programme, which attracted favourable comment from Justice Minister Jim McLay a couple of months ago.

Rydum—it stands for Redirection Youth Development Using Mini-bikes—uses mini-motorbikes (a fun thing) to encourage problem children of ages 11 to 15 to develop self-respect, social skills and community participation and overcome barriers to authority figures.

According to a Maasey University monitoring study last year of the pilot programmes Rydum has a significant improving effect on their social attitudes.

If the equation works, Rydum has probably already saved the country some future incarceration costs. But uncertainty over future Government funding has put long-term expansion of the programme in doubt.

Businesses are therefore being asked to back it.

The alternative to programmes like Rydum—telling kids to pull themselves

together—will not work, society that has got used to state being expected to do pulling together.

We might therefore postulate another quasi-state self-reliance by various components of society in the sense of (instead of the state) the responsibility for looking after individuals equals responsibility for looking after themselves.

As National backer Geoff Thompson says elsewhere in this issue a different context for freedom from state interference brings responsibilities.

Gair adds that if the state does too much it may make people totally dependent on the state.

## Top contest: breweries put lid on sliding sales

by Rae Mazengarb

THE breweries have launched a marketing assault on the beer drinker with three bottle-top competitions running concurrently.

There was a decline in beer consumption of 3.2 per cent last year and each company seems determined to hold fast to its share of the market.

The "Spell Lion" contest held by the Lion Breweries decline to 2.7 per cent, "bettering the average".

The report blamed the decline on the "prevailing financial stringency" and emigration.

Domestic Breweries admitted the overall consumption of beer had declined, but "our own sales figures were proportionately better than the national trends. This means, of course, that we have a greater share of the national market and emphasises the continuing public preference for Domestic Breweries products".

Competitions are obviously favoured by both breweries as the means of ensuring that each customer continues to perform better than average.

THE KING OF BOTTLE TOPS

Lion and DH are promoting similar competitions in their efforts to increase their respective bottled beer sales against the trend of a continuing national decrease in beer consumption.

Lion Breweries "Spell Lion" beer bottle top contest launched last year was successful enough to whet the appetites of the company's marketing division.

The latest promotion offers some 8000 prizes—including a major jackpot draw for a trip to Paris for two plus \$3000 spending money—and will cost the company \$180,000.

The word to be spelt in the "DH Jubilee Celebration Game" is "tops".

DH had planned to launch a campaign last year but general manager Warren Williams said "it didn't get past the look-alikes".

Lion now prides itself on being the originator of the idea and to have another company follow its lead is "the sincerest form of flattery", said its marketing manager, John Burge.

This made something of a mockery of DH's claim that its business remained unaffected by Lion's promotion last year, he claimed.

But DH doesn't think its competition is like Lion's.

According to Williams, the idea is not novel—it's been used successfully for years, and he cites as an example a promotion run by Halls in 1959.

Putting the letters on the bottle tops was the most practical way to set up this type of competition, he said. "If you put an object inside the bottle, it might be swallowed".

Asked about the effects on sales of Lion's competition last year, Williams said the promotion merely put a stop to the "continuing swing to our products".

The two breweries have always been competitive, forever chasing increased sales.

But while the per capita consumption of beer declines, increased sales depend on gaining a greater share of the market.

Not wanting to be left behind in the beer stakes, Lion had leapt on to the beer top wagon.

Last week it launched its own version of tops called "Top-off Leopard".

Williams said the promotion merely put a stop to the "continuing swing to our products".

The word to be spelt in the "DH Jubilee Celebration Game" is "tops".

DH had planned to launch a campaign last year but general manager Warren Williams said "it didn't get past the look-alikes".

Lion now prides itself on being the originator of the idea and to have another company follow its lead is "the sincerest form of flattery", said its marketing manager, John Burge.

This made something of a mockery of DH's claim that its business remained unaffected by Lion's promotion last year, he claimed.

But DH doesn't think its competition is like Lion's.

According to Williams, the idea is not novel—it's been used successfully for years, and he cites as an example a promotion run by Halls in 1959.

Putting the letters on the bottle tops was the most practical way to set up this type of competition, he said. "If you put an object inside the bottle, it might be swallowed".

Asked about the effects on sales of Lion's competition last year, Williams said the promotion merely put a stop to the "continuing swing to our products".

The two breweries have always been competitive, forever chasing increased sales.

But while the per capita consumption of beer declines, increased sales depend on gaining a greater share of the market.

Not wanting to be left behind in the beer stakes, Lion had leapt on to the beer top wagon.

Last week it launched its own version of tops called "Top-off Leopard".

Williams said the promotion merely put a stop to the "continuing swing to our products".

## EDITORIAL

THE revolution in Iran had harsh repercussions for New Zealand motorists because that country provided nearly 40 per cent of our crude oil and naphtha requirements and 18 per cent of our petrol. When Iran resumed oil production, it chose to sell outside the formal contract structure and New Zealand chose not to pay the premiums demanded on the spot market. The result has been a year in which increasing Government pressure has been placed on the public in an endeavour to reduce oil consumption by 10 per cent.

First, there were weekend petrol-selling restraints, then strict diesel rationing, and curfew days.

At that time, there was the threat of even tougher measures; the Energy Ministry was making out options for petrol rationing. But the Government has decided to celebrate Christmas by burning more petrol as well as licence. From December 21 to January 21, the curfew scheme will be suspended and the weekend petrol ban partially relaxed, apparently indefinitely.

The Motor Trade Association - which represents 4000 petrol stations - is delighted. So, too, is the accommodation industry.

The bad news is that another price is expected before Christmas, pushing up the cost of a litre of super from 39.5 cents to as much as 45c, according to some reports.

But price is something over which we have little control. Before 1973, the cost of oil imports was covered by some 5 per cent of our total exports. Oil imports will cost \$800 million this year - or 20 per cent of our export earnings.

The implications for our balance of payments situation, even more than the supply problem, is the reason for consumption controls.

Carless days had been mooted by Energy Minister Bill Birch early in the year, which allowed him and his advisers several months to make appropriate administrative arrangements for introducing the scheme on July 1. But the distribution of stickers and the handling of exemption applications was a bureaucratic fiasco and motorists were given till July 30 to display carless day stickers because extra time was needed to process exemptions and to print extra stickers for the most popular days.

When the scheme was announced, energy officials had little idea how much petrol carless days would save (although they agreed it would not be much).

The success of the scheme depended heavily on motorists' honesty and integrity. But some car-owners are cheating.

Public ignorance is widespread, and many motorists remain uncertain about what to do in an emergency on their carless days.

And the scheme is riddled with anomalies which extend to the good grace granted Christmas holidaymakers. Those who make holidays at other times of the year - many of them working in essential industries and services - are disadvantaged.

The savings achieved are not clear. Birch announced in September that petrol savings were running at 7.3 per cent as a result of carless days and weekend sales bans.

National Roads Board figures showed we used 2.7 per cent less petrol between April 1 and August 24 than in the corresponding period the previous year. Ministry of Energy figures based on petrol drawn from port installations showed the average saving for this year to be 2.8 per cent, compared with 1978 consumption.

We have been told of shortage problems - although petrol stocks in storage look like remaining stable at about 28 days' supply, so enabling the holiday relaxation. But the International Energy Agency estimated that stocks of oil and oil production were at an all-time record by October 1.

To succeed, the Government's conservation measures must evoke widespread co-operation. But if people are not making a concerted effort to cut back fuel usage, then clearly that's because of the ineptitude with which the Government introduced the carless days scheme, and because of overt ineptitudes in its administration.

BANKCARD, already issued to more than 150,000 customers, is expected to provide pretty stiff competition for Visa.

Also available to non-bank customers, Bankcard has stepped into the plastic card market with lower commission rates, offers credit cash and cheque-cashing facilities, but does not charge a membership or annual fee.

But some customers who have received their cards are a bit baffled about the credit limits they have been allocated.

Bankcard officials say these limits range from around \$500 to \$1500.

X and wife shore a joint account, but the husband received a credit limit of \$750; and the wife \$500.

Y and his wife found the reverse situation: the wife got \$750 and her spouse \$500.

X queries the enclosed form for customers to fill out and return to get credit limits lifted. The customer must sign an authorisation for the bank to investigate his/her creditworthiness.

A reasonable request, perhaps - but surely the banks have done just such an exercise to ascertain the original credit limits. Or was that a random selection?

A Bankcard official said the limits are established according to normal "banking policies". Time spent with the bank, account history and so on. Anyone dissatisfied with his/her limit should simply request the amount to be raised.

WITH an estimated 1.2 million plastic credit cards in circulation, the day of the cheque as a useful medium of exchange look like being numbered.

An ominous change in attitudes toward the cheque is

already evident. A member of our staff took a contract to lunch the other day - his treat, of course.

But when it came to paying the bill and the cheque book was produced, a horrified restaurateur insisted on a credit card.

None could be proffered and our embarrassed colleague stood back while his obliging guest settled the bill.

SAD to say, we lost a subscriber during the week because we have been espousing the view of the "trendy left".

We should be supporting free enterprise - "a philosophy which is in a very parlous state in New Zealand," according to our former subscriber's signing off letter.

"Your continued knocking of the National Government ... can only hasten the demise of free enterprise and with it your own journal," he argued.

"Self-interest alone therefore requires a radical shift in editorial policy."

Well, we're a bit bothered about being thought to be anything but in favour of enterprise. With some qualifications, we can put on the record our endorsement of the "free" bit, too.

We certainly don't approve of the way the state sector has been growing, and so we prefer private enterprise, what's more.

Indeed, it is our belief in these principles that drives us to grizzle about some of the National Government's antics over the last four years.

We do acknowledge, of course, that the National Party professes to endorse free enterprise. And we are pleased to note that Trade and Industry Minister Leane Adams-Schneider has put on record a denial that the two Commerce Amendment Bills he has been handling are not compatible with the Government's avowed principles.

He said the first bill spelled out in detail the measures of price restraint that might be imposed under the Commerce Act 1975.

"Price restraint has been provided in the act from the outset, but no one knew what it was," said the Minister.

"Now the measures that may be imposed are clearly set out."

The bill gave the Government the power to impose price restraint measures on individual traders or groups of traders, he said.

Thus in good free-enterprise style, the measures "will enable the Government to restrain traders or industries from passing on in prices excessive costs resulting from soft wage agreements that would be harmful to the public interest."

The Commerce Amendment No. 2 Bill was before a select committee and was open to critics to provide evidence of the type of problems that might be experienced.

So there. All is well in the world of laissez-faire.

And that would have come as a pleasant surprise to the Chambers of Commerce, which had condemned the bill.

Chamber president David Fine had been under some

misapprehension - along with NBI - that the combined effect of the two bills gave discretionary power to a Minister and a Government which was virtually unresponsible to the courts outside agencies. "The powers could be used to achieve political or economic ends removed from the normal ambit of price restraint," Fine said.

Our only point of contention now is whether or former subscriber is a member of the Chambers of Commerce - and if so, at what point his faith in the National Government will become incompatible with the free-enterprising chamber's attacks against legislation of this type that he is obliged to resign.

WHEN it comes to testimonials, sometimes Continental Airlines does a better.

According to the young Air New Zealand's speed some \$200,000 of its ship from that perennial commercial virgin, Alan White.

And while the oil carrier mends its white basket in Parliament, Continental got a free plug from British Royal.

Continental's regional directors received a circular from his Los Angeles office saying Princess Alexandra and the British Consulate in LA wanted a text and their personal Continental for the first flight from South Pacific to California.

The circular quoted the Princess saying: "The service on Continental was superior to that of Air New Zealand."

The circular went on: "memo to all staff. Sometimes we do it better. And cheaper the circular might have added."

The commercial virginity of British Royal is hardly likely to come under question.

A Committee of Inquiry into the meat industry particularly the Meat Producers Board is to be ordered by Agriculture Minister Duncan MacLennan.

The committee will be established after a year of turmoil in the industry.

First there was the question of delevering in the freezing industry.

Then Waitaki NZR sailed directly into the path of the board's shipping policy.

And the board's finances have been under strain as promotional activities are stepped up to clear a backlog of lamb on the British market.

The board is prompting the board to seek authority to extend the levy on meat exports to the domestic kill. The Government has told the board to consider increasing the export levy paid by farmers.

Federated Farmers' pressure for the committee has been strong for some time.

The federation scored an early success by getting its version of the Meat Industry Amendment Act to the law drafters before amendments could be proposed.

The federation is critical also of the board's handling of the dispute with Waitaki NZR, when the company wanted to ship meat at the cheaper freight rates offered by the non-conference Belgian A&C lines.

Meat Board chairman Charles Kilgendorff agreed there was a need for the committee at one of his monthly informal meetings with Agriculture Minister Duncan MacLennan.

In his address to Federated Farmers annual conference, MacLennan mentioned that it may be time to kick around a few sacred cows.

Particularly he mentioned shipping rate negotiations and the killing of lambs.

Kilgendorff says the investigations will be in the interests of the meat industry.

"There are some things the board thinks would be well served," he said.

"All boards and all institutions should occasionally have a look at themselves."

Kilgendorff is keen that the committee should have included in its terms of reference the board's promotional and research role.

He suggests the committee should look closely at the direction the meat industry is taking, whether the trend to more processing before export is correct.

"It is time to look at the direction the industry is heading and at some of the good ideas and misconceptions that exist," Kilgendorff said.

Under the heading "misconceptions" will be the board's shipping policy, which directs exporters to use ships of the conference lines except where there is no service.

Waitaki NZR chose to challenge the policy forcing the board to seize a shipment of 32 containers bound for Europe.

The board's action was viewed in some industry quarters as over reaction and heavy handed and the Supreme Court may yet be called on to test the validity of the board's actions.

The federation wants the committee to look thoroughly at all aspects of the processing industry and delevering. It wants progress on the Meat Industry Amendment bill, due to be studied by the Government during the Christmas recess, to be delayed till the committee's report can be considered.

The board has been running a deficit for many years, drawing on industry reserves for the shortfall. In the last five years its expenditure has doubled to \$9.4 million for the 1978/9 season.

Just over \$5 million was spent on promotion, \$3 million on administration both at home and overseas, \$640,000 on grading and \$4.3 million.

This year the deficit is expected to grow even higher as inflation and the devaluing dollar add to the board's costs while the income from the 0.7 cents a kilo levy on meat exports hardly changes.

## Public accounts set record deficit

## Economics Correspondent

THE deficit in the Public Account to September was \$1043 million, an increase of \$404 million during the September quarter alone. This is the highest deficit ever recorded in a September quarter.

Interestingly, when the Public Accounts are analysed on an annual basis, the September figures suggest that the rate of change in the deficit is slowing down. The deficit for the entire year to March 1980 is expected to be lower than last year's high of \$1444 million.

But the September figures do not put the Government's budgeting ability in a very good light. It seems likely that the deficit for the March quarter will be between \$300 and \$350 million more than the \$1090 million recorded in this year's budget estimates.

As the table shows, in the six months to September, government expenditure reached 47 per cent of the amount budgeted (including \$17 million supplementary votes appropriated since the release of the Budget). Last year, when the deficit reached an all time high for the year, the Government's spending in the first six months was only 46 per cent of the amount budgeted.

The good news for the Government is that the rate of increase in Government spending does appear to be slowing down in June this year. It was spending at a rate of nearly 16 per cent. At the end of September, Government spending was less than 15 per cent above the amount spent in the first six months of the year before.

But the rate of spending will have to slow considerably in the next two quarters if total spending for the year is to reach the target of \$7685 million. This amount represents an increase of less than 12 per cent over the year before.

Total receipts to the Public Account are up on last year. Total receipts for the first six months of this year equaled 39 per cent of the budgeted level compared with 37 per cent last year.

The rate of increase in receipts of 18 per cent is still substantially below the increase of nearly 22 per cent estimated in the Budget.

Income tax receipts, which account for 30 per cent of the Government's income, are the

main factor which will generate increased tax revenue this year, were only 21 per cent of the budgeted level by the end of September. Last year, the same figure, income tax receipts were 33 per cent of the budgeted level.

And the Government's forecast for income tax last year indicated it to be \$210 million more than the Government was actually able to collect for the year.

If current trends continue, the amount collected in income tax revenue this year could be as much as \$300 million less than the \$4560 million the Government plans to collect by March 1980.

In fact, the current trends are unlikely to continue because tax reductions for some salary and wage earners came into force from October 1 this year.

Finance Minister, Ron Muldoon, said that one reason tax receipts appear to be growing at a slow rate is that they are recorded in the suspense account. The suspense account shows what Treasury has received in revenues, but has not had time to classify by the time the September accounts are closed.

In 1978, the September Public Accounts were released in late November. It appeared the Government did not want to publicise how high its deficit was until after the election. This year they were released on October 31.

Perhaps part of the price of more up-to-date accounts is less time for a complete classification of revenues and expenditures. But the Government must be committed to getting the accounts out just 31 days after they were closed.

Further, Muldoon's press statement, released with the accounts, made a more sensational claim. It could not by any means be considered an impartial assessment of what the accounts show, but at least it explained the accounts in the familiar Budget Table 2 form.

In the past, the Prime Minister has preferred to evaluate the Public Accounts in accounting terms beyond the understanding of most taxpayers, who after all determine the ability of the Government to carry within a democracy.

(1) Monies spent but not yet classified by Government function.  
(2) Monies collected in revenue but not yet classified by type of receipt go into the Suspense Account.

This Government has shown a complete inability to budget properly. But any attempt to make a complete classification of revenues and expenditures, but the Government must be committed to getting the accounts out just 31 days after they were closed.

Further, Muldoon's press statement, released with the accounts, made a more sensational claim. It could not by any means be considered an impartial assessment of what the accounts show, but at least it explained the accounts in the familiar Budget Table 2 form.

In the past, the Prime Minister has preferred to evaluate the Public Accounts in accounting terms beyond the understanding of most taxpayers, who after all determine the ability of the Government to carry within a democracy.

Any way this year's Budget was probably less than satisfactory. With

the balance of payments deficit showing signs of increasing again, it may be necessary for the Government to increase its spending above what is planned for the year in order to keep the economy going. So it may be no bad thing in economic terms if the Government's public account deficit this year does turn out to be above the level budgeted.

Here's four wheels for super-tough power, proved not on rough roads... but on no roads at all. Wherever you want to go, Land Cruiser will take you - round trip.

Its engine is tried and true, 4230cc developing 128 HP (SAE net) at 3600 RPM. That's plenty of power for hill-climbing, highway cruising, or off-road exploring. Built to last, Land Cruiser is ready for any trial you want to put it through.

Lots of attention has been paid to making Land Cruiser last. Oil is forced-fed throughout the engine lessening friction

and lengthening engine life. Then there's the suspension. What can be said? It is built to go anywhere... that floating front axle helps Land Cruiser through sand, mud and any other hazard. And the same dual-line brakes that are so safe off-road are double protection on the tarmac.

Specially designed seats let the driver's shoulders and torso move freely while the hips are held firm and snug. This is best for rough going. But that same comfort comes through on the highway too... comfort augmented by thorough ventilation that eliminates stale air. When you're out in the wilderness, you need a partner that is all heart... Land Cruiser is. It will take any road. And when there's no road, it makes its own. Toyota engineering made it that way.

THINK IT OVER.

TOYOTA

You don't close your eyes when you drive a car... so why should you when you buy one?

## TOYOTA LAND CRUISER.

When there's no road, it makes its own.

## When the heat's on, it's not just your workers who suffer

Your productivity plummets like a stone.  
Your accident rate soars.  
Your labour and customer relations take a fast turn for the worse.  
Exports take a dive.  
And quality control goes out the window.

Fortunately, Colt can make sure your staff always work at a temperature that suits them best — no matter how hard the sun's beating down outside. We can supply the ideal ventilation or evaporative cooling system for your operation. And we can do it for a price that won't strain your energy bill.

Colt take advantage of overseas contacts and years of research into the effect of excessive temperatures on worker production, and use this knowledge to design the ideal system.

We can also supply fresh air to cool the worker rather than the whole factory and install special re-circulation unit ventilators to minimise heat loss when winter comes around.

If you'd like to know more about how Colt can help your staff keep their cool (and their production rate) in all weathers, send this coupon today for full details on Colt Ventilation Systems.

Mail to Colt (NZ) Ltd, P.O. Box 4182, Christchurch.

Please send me full details on how I can keep the heat down and production up with Colt Ventilation Systems.

## Union forms industrial relations consultancy

by Colin James

ONE group of employers may soon find itself negotiating with a union-owned company for a labour contract in much the same way as individual employers deal with other companies on other matters. Trade Union Research and Consultancy Ltd has been formed by the New Zealand Harbour Boards Employees Union to act as an industrial and economic consultant to itself and any other unions that want to buy in.

Through the company, union secretary Ralph Gerdan, 30, aims to do the sort of detailed research that will enable new paths to be mapped out in union-employer negotiations. Its wide-ranging articles of association will allow it scope to operate in many fields — providing staff and office services, training, legal and other advice and possible travel agency and credit union management.

It may also be used as a negotiating agent for the harbour boards union.

Gerdan has hired widely respected industrial lawyer Rod Trol away from the Federation of Labour to work fulltime for the company. It will initially let ad hoc contracts to economists for specific projects and may eventually hire fulltime economic staff.

Gerdan's move is in reaction to what he sees as inadequate finance and

resources for the FOL. He feels unions need to change their negotiating approach drastically if they are to adequately protect their members in the 1980s and beyond.

"There is a desperate need for an efficient consultancy organisation outside the FOL, to give unions day-to-day advice in the administration of their affairs and to prepare a substantial appraisal of various industries to help unions in their negotiations," he says.

The company is being established from a research fund held by the harbour boards union. Other unions will be invited to subscribe.

It will operate as a self-funding venture, selling its advice, research and services to client unions.

Why a company? The reason is its flexibility. Unions are legally restricted in what they can do.

An example of the problem is the award system. Though Gerdan plans to continue for a while at least with awards in his industry, he says they restrict what can be bargained over.

"They contain unions and employers in an outmoded straitjacket of the 1960s," he says, referring to the passing in 1964 of the original Industrial Conciliation and Arbitration Amendment Act, forerunner of the present Industrial Relations Act.

"They allow Government

THE INDUSTRIAL FRONT

intervention, wage-fixing and trend-setting awards that effectively fix the rates, within a per cent or two, for all workers.

"Negotiations should be voluntary and private and should encompass as wide a range of matters as are available in the imagination of the bargainers."

One example of such matters is worker control of superannuation funds and the management and size of the funds and contributions. See NBH, p27, June 13.

Another is worker participation.

"We need to know how to bargain for involvement in decision-making and for that we need to know the structure of companies and where the decisions are coming from, particularly when they include foreign investment."

Gerdan sees the company as providing background material for negotiations with

employers. He sees this function going wide and deep — into harbour boards' profitability, usage and costs, for example, and the implications for future investment and possible rationalisation.

The cost and impact of containerisation and the coordination of the ports and the internal transport system is another aspect: whether internal shipment costs are higher than external costs, and if so, why.

Another aspect is the impact of technology, which can only in Gerdan's view be properly assessed by using sophisticated research techniques including modern data processing technology.

A fourth aspect is the actual cost of labour to the boards, the total cost of the industrial agreement and the pass-on factor to the port user — the markup, in other words.

"We think it is the right of the union to determine how that total wage bill is to be paid and who it is to be paid to," Gerdan says.

He foresees the introduction of flexibility between wage rates paid to different types of harbour board employee, limiting margins in percentage terms in return for a "decent minimum living wage" for the workers at the bottom.

"Trade unions bargain for tens of millions of dollars over the wages table every year," Gerdan says. "It is one of the most important factors in the New Zealand gross national product."

"We need to ask ourselves as unions whether we are handing our side of the con-

tribution to the economy from an informed and responsible point of view.

"How much control over this enormous slice of wealth do we really have? Is the wealth being distributed amongst workers in a fair and equitable manner or is it continually restoring unnecessary relativities and inhuman traditions?"

"The unions have got to illustrate that they can manage the collective sale of workers' services in an expert way. In this respect the FOL has yet to be born and yet to get into the race."

Gerdan says that by setting up a company for research and eventually negotiating the "sale" of labour, the union is "accepting that a trade union is a corporate body similar to companies in many respects."

"There is no inherent difference in money terms between a corporate body selling a wages contract to a company and a deal between companies on raw materials or components."

"It comes down to reappraising the contractual relations between the workers' corporation and the employers' corporation."

Gerdan notes, in the context of the continuing debate over voluntary unionism, that port users have little choice as to which harbour board they deal with.

"So the employers can't really say that we are not in a contractual situation when they have got exactly the same ability to sell the services of the port as we have to sell labour services."

## Ford: number one slot

BASED on registration figures to September, Ford Motor Company's claim 1979 as the year of the Ford. It has retained number one slot all year and doesn't look like being topped.

Registrations of new cars to September totalled 46,716 after 1984 ex-overseas cars are taken off. Based on this level of trade, the year-end total will be about 67,500 — close to Mazda NZ Ltd's forecast of 68,000.

Besides top market share, Ford dominates all three sales classes. The Escort range has outsold Toyota's Corolla by 400 units.

Corolla continues to show the rest of the medium size market what a wide range and emphasis on fleet sales can do for market acceptance.

Corolla is New Zealand's top-selling car.

In the large market — which has contracted further in 1979 — Falcon tops the list, keeping arch rival Holden in number two position.

Holden's Commodore may provide Falcon with stiff competition in the near future when supplies of local assembled cars increase.

So far this year, the large sector has accounted for 11.3 per cent of total registrations, down from 12.7 per cent in 1978.

The trend has been for continued decline. But Ford managing director, Joe Aulon, says: "In our judgment, large cars are going to continue to hold their present 10 per cent or so of the total market. There is unlikely to be much further reduction as there will always be some who really need this size of car for the continuation of their business or their life style."

The other market sector has seen minor changes this year, with the medium 1301-2000cc class falling from 49.5 per cent in 1978 to 46.1 per cent.

This fall, and the small decline in the large sector, have increased the 0 to 1300cc bracket, improving from 37.6 per cent to 46.6 per cent.

It appears unlikely that there will be any major shifts in these two classes in the near future, although popularity of smaller cars could reach 1978 levels of 46.3 per cent.

Cars manufactured in Japan are the most popular on the local market, taking 47 per cent. United Kingdom-sourced ones hold just over one-third, while Australian cars total 13 per cent.

Of the Japanese marques, Mitsubishi are the top sellers.

## Rumour machine sails

by John Draper

THE rumour machine is setting sail on the non-conference rate cutting Belgian shipping line ABC.

NBR understands from industry sources that ABC originally wanted to join existing conferences to serve New Zealand before embarking on its cut rate attack.

A predecessor of the Dutch shipping line Nedlloyd operated outside the European conference for 10 years before finally being accepted as a conference member.

But Tsvi Rosenfeld, the Belgian millionaire owner of ABC, denies that it is his long-term desire to join the conferences operating to Europe or North America.

He admits 18 months ago he did try to reach agreement with North American conference operator ACT.

"I wanted to reach co-operation with ACT for three reasons", he told NBR.

"First in 1975 I had entered into a three year contract with Dupont from Geraldton, Australia to the United States, which was renewed last year for a straight additional 15 years and I had to position ships in Australia.

"The shortest route for positioning ships back in Australia would have been able to take care of the Dupont contract.

"I wanted to put the ships at the disposal of ACT for the south-bound leg from the USA because with two ships you cannot start a service and my family in Israel are agents for Farrell Line and therefore I could not compete in this trade."

Rosenfeld denies there was any question of negotiating for admission to the UK/Continent to Australia nor the UK/Continent to New Zealand service.

"I did not think it would be necessary for us to start the ABC Containerline at that time, but was just trying to find the best possible way to bring the ships from the USA to Australia which of course was with containers."

ACT's disinterest encouraged Rosenfeld to consider operating a UK/Continent to Australia/New Zealand container service with a minimum of four ships.

"I did not discuss with ACT nor with any other conference member for that matter, the possibility of admission to the UK/Continent conferences," Rosenfeld said.

"After making a thorough market study I decided to make the Containerline service around the world and 14 months ago ABC Containerline started operations with four bulk plus container carriers from Australia to USA/UK/Continent and from the UK/Gulf/South Atlantic to UK/Continent."

Two months ago New Zealand was added to the round the world schedule and two extra ships were introduced to give a frequent service.

Rosenfeld also claims that the Conference lines or spreading rumours as to the length of the Dupont contract which provides the base loads for ABC.

"The contract is for 15 years as from January 1 1979," Rosenfeld said.

"There is absolutely no question of renewal every three years and Dupont own the majority of the shares in the mine at Geraldton."

## Armed forces manoeuvre for buying spree

WITH a note from their political masters in the form of the Defence Review the armed forces are on a buying spree.

The Navy will get most, a frigate to replace HMNZS Taranaki, helicopters to replace the ageing Wasp while the army will get Scorpion armoured cars and a wide range of support vehicles.

The Air Force gets little this time round, three Air New Zealand cut off Friendship and the nearest hint of a new Hercules freighter by the late 1980s. Elsewhere the slightest hint of a defence dollar has sent arms salesmen, with their lavish expense accounts and special way of entertaining, in hot pursuit.

But not, it seems, to this quiet backwater in the South Pacific. Westland Helicopters regional sales manager Rodney Parfitt dropped by last week to expand the virtues of the Lynx family.

Appropriately the event, attended by the Chief of Defence Staff Air Marshal Sir Richard Bull and his senior officers, was held in Armour Avenue, Wellington.

For Westland, trying to provide the Lynx in three different forms to fulfill the needs of each service.

GOVERNMENT ADMINISTRATION

the venue normally used for wedding receptions, may also have been in keeping.

It was very much the soft sell, two films, a slide show to point out the technical merits and a pleasant though hardly lavish lunch.

But the Westland Lynx in its naval kit has little competition. The Navy already flies its predecessor the Westland Wasp and progression to the Lynx is almost a natural step.

The American competition is twice the size and too heavy to operate from the tight decks of the New Zealand frigates, a point Parfitt knows well.

But the sale is not in the bag and there is the untidy prospect of selling the Army Lynx and the newest in the range the WG30 to fulfill the requirements mentioned in last year's defence review.

The review, for an unspecified period but thought to be the 1980's, says the Army's Infantry and Sionix helicopters can be kept in service "through the review period".

But on safety grounds a small element of twin engine helicopters is justified on the grounds of safety should one engine fail in the mountains and over sea.

"Such aircraft also offer potential for coastal fisheries protection and Antarctic support tasks and their introduction is planned during the review period."

At around \$3 million each, the WG30 and the Lynx are at the expensive end of the market. As an established Westland customer, the Defence department is kept up to date by the company and its competitors on developments.

Westland has already arranged for the British Royal Navy to call by once with a Lynx equipped ship to give the New Zealand navy a chance to see it in action.

And Parfitt will happily arrange for another if the Defence chiefs want.

He makes no secret of the co-operation between the company and the armed forces. The Lynx was developed specifically for the British Navy, and now they are on to be part of the solution.

There is also a possibility of Army demonstration next year if enough interest was shown.

Last week's show was a first, a shop window where the Navy has set out its requirements in detail its requirements in detail its requirements in detail.

With that aim in mind, the company is ready to send technical experts to talk with the Navy on details and if necessary, a range for officers to travel to United Kingdom to see a demonstration held by the British forces.

New Zealand's irregular often small orders for defence equipment attracts few bidders unless they include a variety of an Australian base.

Defence planners do not do their study on paper, specifications sent by hand, interviews, and the visit of Defence Attachés at overseas posts to see what is possible.

The study done, a team of overseas for a final estimate. The armed forces public money. Less than 10 per cent of the total is for equipment and in real terms, amount available is now less than it was five years ago.

Expenditure was kept, pending the publication of the Defence Review but a factor that is already being considered by some Defence officials.

General Motors, Imperial, specialist vehicle for military use, the Army after considerable interest was shown.

These vehicles are now being sold and virtually sold on the local market and the Army's evaluation team is working.

Tenders now may be called for assorted vehicles early next year.

buying new equipment - lengthy process. The Defence department is studying a report to Treasury, eventually that goes to the Cabinet Defence Committee and for big decisions such as the Taranaki replacement ship the full Cabinet.

## Board's 'sympathy' for foreign interests sparks attack

by Warren Berryman

THE Wool Board's trade policies favouring the shipping cartels and overseas wool interests are under fire from the New Zealand-owned sector of this country's wool industry.

The Wool Board is accused of acting contrary to the interests of the farmer and locally owned wool companies and exporters by siding with foreign-owned wool buyers and the shipping lines.

On one side of the argument are the locally owned companies which control about 30 per cent of wool exports; on the other, the foreign influenced "wool club" which controls the remaining 70 per cent of exports.

The "wool club" comprises the Wool Board, Dalgety's, Whitson NMA, overseas wool buyers, and the shipping cartels.

Two major points are at issue:

1. The Wool Board's refusal to allow ABC Containerline to carry wool at rates less than those charged by the shipping cartels, thus banding a freight advantage to our Australian competitors. The higher freight rates, insisted on by the Wool Board, mean lower wool prices paid to the farmer by overseas buyers, it is claimed.

2. The Wool Board's policy of having freight rates on wool charged on a per tonne basis rather than on volume - or box rate basis.

Several local companies gained a technological advantage over "wool club" companies by installing high-density baling presses which allow them to compress double the amount of wool into a shipping container.

Space saving through high-density baling can - and has in the past - cut freight rates almost in half - provided the shipping company is allowed by the Wool Board to offer a box rate; freight charged on a per container basis rather than per tonne.

Non-club companies - such as Robert Ferrier Ltd, Mair and Company, Louis Wood and Son, & Lichstein and Co, and the New Zealand Co-operative Wool Marketing Association Ltd - claim to have been severely disadvantaged by the Wool Board's shipping policies.

But the non-club companies have pioneered high-density baling and dumping - and would like to see their initiative and investment pay off.

The Wool Board and the shipping cartel negotiated a small freight concession last year for high-density baling.

But the independents complain this concession is "skeleton in the closet" compared with the attractive box rates they have been offered by non-conference lines and prohibited from accepting from the Wool Board.

The same cartel ships that serve the UK and Europe

TRANSPORT

trade carry Australian dense-baled wool for less than they charge New Zealand shippers.

Where the independents have been allowed to use non-conference ships they have achieved savings through box rates of up to 40 per cent.

But the Wool Board will not allow them to use non-conference lines on the major wool trades.

And the Wool Board is reluctant to allow the independents to negotiate box rates with the cartel because that would give them a freight advantage over the 70 per cent of the wool trade which is foreign owned.

The Wool Board's policy has been one of uniformity and majority rule. This means the technological innovator is not allowed to gain any advantage over his competitors.

The Wool Board can justify say it is acting in the interests of a majority of the wool trade. The majority appear to want uniform freight rates with no advantage to the independents using dense-baling facilities.

But the majority - including overseas interests - are said by board critics to have little investment in New Zealand aimed at cost-saving in freight and handling.

The independents ask "what is the value of expensive containerisation if the ability to consolidate cargo is stifled by per tonne rates that discourage investment in new technology?"

Mair and Co pioneered a box rate to Mauritius and Hong Kong, achieving a considerable savings on freight and an advantage over their "in-club" competitors stemming from their investment in dense baling equipment.

But last year, the Wool Board stepped in under the powers of the Wool Act. It imposed a per tonne rate on those trades, wiping out Mair and Co's freight advantage.

Now the Wool Board is expressing a desire to stop all box rates on this trade, Australian, Indian, and Pakistan trades.

The dense-baling independents have enjoyed freight reductions, through box rates, from 20 to 40 per cent on those trades.

The independents have focussed criticism on David Young, the Wool Board's transport manager.

But Young acts on the advice of the Wool Freight Council, and a Wool Board official cautioned NBR against publishing references critical of individual staff members. He said staff carry out the policies of the board and the Wool Freight Council.

The council is dominated by overseas wool huying and shipping interests with one dissenting exception; Jack McCarthy of the New Zealand Co-operative Wool Marketing Association.

The New Zealand Co-op, with its 10,000 farmer members, as its name suggests, is wholly New Zealand owned and our biggest exporter of scoured wool.

McCarthy came out strongly in favour of free competition from the banned ABC Containerline and in favour of box rates in a recent issue of the Co-op's newsletter.

"It is ironic that the 70 per cent sector of wool exports, basically controlled by overseas interests, all insist on competitive access to the purchase of wool clip but are not at all interested in encouraging competitive elements to curtail internal handling costs or the costs of overseas freights," McCarthy said.

"On the other hand the 30 per cent locally owned segment is pushing for genuine competition from the time the wool passes through the farm gates. It may well be that a medium of competition would be the best solution to local exporters' problems - as simple as ABC."

Meanwhile New Zealand-owned wool companies are submerging their separate interests to form a united front against the Wool Board's transport policies.

Support is being sought from Federated Farmers in a fight that is likely to cast the Wool Board in the role of a foreign agent - rather than the New Zealand wool industry's organisation.

The Meat Producers Board has powers similar to those wielded by the Wool Board and used them to seize a large shipment of meat from Waitaki NZR to prevent Waitaki from shipping with ABC.

Shipping with ABC would have saved Waitaki about \$5 million a year. Now Waitaki is going to take the Meat Board to the Supreme Court to challenge its powers.

In the end competitive shipping rates are unlikely to emerge without legislative changes to the Meat and Wool Acts.

Powerful vested interests dominating the Meat and Wool Board's decision making are unlikely to relinquish their favoured position under the shipping cartels monopoly unless free enterprise competition is enshrined in law.

by Colin James

THE Commerce Amendment Act, with its sweeping powers of Government intervention in business, does not immediately strike one as a shining example of the reassertion of National Party state-hands-off philosophy.

How is it to be reconciled? National Business Review put the question to two backbenchers who have argued the anti-state case forcefully during this term, Paul East (Rotorua) and Geoff Thompson (Dunedin).

## Geoff Thompson: reminder about responsibility

Thompson: The Commerce Amendment Act can be justified as the third stage in price responsibility.

It gives the opportunity to some in an individual transgressors rather than an bloc transgressors, a power already held under section 82 of the main Act and the price surveillance regulations that were introduced earlier this year.

The timing is also quite significant because in April we passed the Stabilisation of Prices Regulations but we allowed six months for that to come into effect. The Commerce Amendment Act has come in more or less to coincide with that.

If you take it straight down the line on this question of price responsibility it is justifiable.

The question that might be asked is, Doesn't it represent the reintroduction of old-fashioned price control? The answer is, Not at this stage.

NBR: Is it aimed at the consumers?

Thompson: I would say, quite the contrary. It is aimed at irresponsible employers.

NBR: But irresponsible employers who give in to unions?

Thompson: You might say this adds a little more backbone to employers. In my view there are certain employers who are not known for standing up to wage demands because they know they can pass them on in a cost-plus society. A little reminder about responsibility in that respect is not a bad thing.

NBR: So this Act is in that sense doing what the market now fails to do?

Thompson: It is fine to talk about the market in the broader sense, but I don't think in the scale of our market there is sufficient competition to satisfy all cases.

We also have a very, very highly structured pricing system through a large number of pricing authorities and things like that. Those have grown up over the years and virtually endorse cost-plus instead of saying, You go out there and justify your competitiveness.

NBR: The other concern about the Act is that it does allow the Government to deal

with individual cases. Isn't that contrary to a fundamental principle of British law that laws are applied only to classes or people or to the whole community, but not individuals.

Thompson: No, I don't accept that as an accurate principle. In the Commerce Act as it stood you had the opportunity to home in on offenders. A classic example is the monopoly controls which I think are important.

I also don't believe that you have to accept that all traders, whether they are individuals or a class, are there for the public benefit. They are there to do as well as they possibly can and as well as the market can stand.

Some people will do that with honesty and broad regard for social responsibility. Others will screw whatever they can out of it.

NBR: You don't regard this as an extension of the powers and activities of the state into the marketplace?

Thompson: The strict attitude I take is basically that the state underwrites the responsibility to provide the

Both were key figures in the backbench destruction of the fiscal regulator, the Treasury device for reducing income tax while Parliament is not sitting.

East led the original opposition; Thompson proposed the solution finally accepted.

The essence of their answers is that we live in an imperfect world in which the market is deficient in some respects.

climate within which business should operate. The climate is the sort of backdrop or the background control — not the detailed control, but background to know how far businesses can go.

NBR: But doesn't this Act go into the realm of detailed control, enabling the Government to single out individual employers and arbitrarily control their prices?

Thompson: It gives it that power, yes. It has a regulation-making that is broad enough to single out individuals. But whether it would do it arbitrarily or without regard to a broad standard or test is something else entirely. I don't think it would.

NBR: But you are quite happy to have this Act on the statute book for the use possibly by a socialist government in the future?

Thompson: There is nothing we can do to stop a socialist government the day after it becomes the Government introducing the most draconian anti-business measures.

So whether it is on the statute book now is entirely irrelevant and I think we can look at any law only in relation to the way we would apply it.

NBR: You see no contradiction between this Act and the mood in the party this year which I think you fully share of a return to the principles in the party's constitution?

Thompson: I am very aware and support the philosophies which have been emphasised this year. But as a politician I also need to ensure that it is interpreted in practical ways.

So that is why you might see moves that appear to be contrary to or not fully consistent with the purist approach. What I am saying as a politician, is that practical involvement and exposure to all the complexities of government introduces some restraints necessarily.

So, while I might not go so far as saying that politics is the art of the possible, I do say that pure philosophy must be tempered by political practicality.

But I want to make it very clear that I am very strongly committed to the party. I got me where I am, I endorse, because they are my fundamental feelings, the conservative approach to administration and I endorse primarily the right of the individual to get out and do what he wants to do within the law.

But freedom, which is what a lot of what the party has been talking about this year, involves responsibility. In the Commerce Amendment Act we in Parliament are just reminding businessmen of the responsibility that goes with their freedom.

NBR: If it starts going too far down the road towards full price control, what will you do?

Thompson: I will argue that we have got to be very careful in maintaining our attitude to price control and that while the complexities of industrial law and commercial law can cause us to change from time to time, that's a broad-ranging principle which we have got to be careful about.

## Paul East: power to stop "soft" settlements

I think there is some strength in the argument that the Commerce Amendment Act can be seen as a measure to give considerable power to a Government which many would argue was contrary to the true philosophy of private enterprise in that businesses should suffer as little Government control as possible.

But that is a fairly simplistic way of approaching the subject. I will take first the constitutional point and differentiate between the Commerce Amendment Act and the measure proposed earlier in the year regarding the lowering of taxation when Parliament wasn't sitting — the fiscal regulator.

The situation with the Commerce Amendment Act is somewhat different. It doesn't have the same historical significance and it doesn't have the same constitutional significance.

But it can be criticised in that it is giving to the

Government a considerable amount of power. Power is necessary, of course, if a government is going to govern a country and the measure of power that a government takes to itself often is balanced by the problem which has to be dealt with.

The Commerce Amendment Act is endeavouring to grapple with an extremely difficult problem, that really is at the crux of the whole economic future of the country — the present rate of inflation and the ability of the Government to hold inflation and also to ensure that there isn't a round of inflationary wage settlements which will pass on costs to the consumer and in the end benefit nobody.

I have no doubt that there have been in a number of industries what could be termed "soft" settlements where businesses have settled under union pressure at award rates which aren't in the interests of the country as a whole.

And they have done that because they have the ability to pass on the costs involved in a high wage settlement directly to the consumer. That only fuels inflation.

So this measure will allow the Government to prohibit industries from passing on costs to the consumer in order to pay what the Government considers to be unrealistic wages.

Now that can fairly be criticised as setting the Government up as judge and jury in its own case.

But the economic future of the country is at such a crucial stage that I believe the

Government can rightly assert this power.

We still live in a parliamentary democracy, we elect the Government to govern, hopefully to hold it in place and this is one piece of equipment that the Government can use to ensure that wage settlements aren't unreasonable and inflation is held within reasonable bounds.

I agree that this measure places considerable power in the hands of the executive. However, I certainly don't imagine it will be used in any vindictive way, selectively against any particular business, but rather that it will be used in a situation where there is blatant evidence of an award being settled at a quite unreasonable rate on the basis that the industries concerned can pass these costs directly

on to the consumer.

I see the measure really as some sort of halfway house between the undesirable situation of complete price and wage control and the alternative and more desirable situation where there is complete free wage bargaining.

I don't really believe that we can now claim we have free wage bargaining.

But I also believe that the economy is at a stage where we are unable to afford the luxury of free wage bargaining.

The Government, being elected to govern, must spell out clearly what it believes to be an appropriate level to settle wages at, offer firm guidelines to industries and unions and only if these guidelines are exceeded should it use any of these measures under the Commerce Amendment Act.

## Savings stock issue maintains interest rate level

by Peter V O'Brien

THE Government's decision to raise the interest rate on its new savings stock issue which opened on Monday is another indication that interest rates are unlikely to ease in the short term.

The 11.5 per cent rate compared with 11 per cent offered for one year on previous savings stock issues. It is below the rates offered for one year by leading finance houses (they are in the 14 per cent range of slightly higher), but it will probably attract a reasonable amount of money from people looking for a top security over a relatively short period.

An investor on December 7,

however will receive an effective return of 13.4 per cent if he redeems 313 days later, on October 15, 1980.

The changes to inflation adjusted savings bonds should also help a market among those who are prepared to tie up their money for a longer period, provided they will get back, in terms of inflation erosion, at least as much as they invested.

The bonds were introduced to the savings system in the 1977 Budget. The bonds have a minimum term of five years but they are redeemed at a value which increases in line with movements in the Consumers Price Index. The additional "value" is non-taxable.

although the interest rate of 2 per cent, paid annually, is liable for tax.

Until last week investment in inflation adjusted savings bonds was limited to \$1000 a year for each individual, with a maximum holding of \$5000.

The annual investment is raised to \$3000, while the total holding moves up to \$10,000.

The Government has received about \$20 million since the bonds were introduced, but there may be renewed interest in this form of alternative investment following the new provisions.

Assuming the inflation over the next year is 14 per cent (whether it is higher or lower fails to affect the

example), the investor in inflation adjusted bonds receives a "return" of 16 per cent, of which 14 per cent is tax free.

The savings stock, by comparison, pays 11.5 per cent, which is all taxable, subject to the general tax exemption applicable to interest payments.

Assuming that an individual has already used the general exemption, and has a marginal tax rate of 30 cents in the dollar on additional income, the holder of \$5000 in the savings stock finishes with \$587.50 of income after tax.

The same \$5000 invested in inflation adjusted savings bonds will give \$750 after tax for the year.

If there is a 14 per cent inflation rate.

The savings stock investors of course, receive their return after one year, while the person with inflation adjusted savings bonds has to wait for five years before getting the funds.

The bonds also have the other slight disadvantage that the increase is based on the total movement in the CPI over five years with a 5 per cent minimum a year. Therefore, that investor would have to see an overall change in the index more than whatever interest rates the Government decided in each annual stock issue over five years.

But the tax free nature of the CPI increment would probably still outweigh the alternative investment unless inflation averages out at less than 6 per cent a year until 1984.

The latest moves may seem insignificant in themselves, but when coupled with other movements in monetary policy and official monetary aggregates they show a continuation of the tight rein policy apparent this year.

The trading banks felt the effects of tightening liquidity in recent weeks. Their reserve asset ratios were eased for November, after some banks were chasing money at unusually high interest rates.

The commercial bill market is now seeing the discount rate on 90 day paper moving to the 16 per cent mark, and at least one company was seeking substantial sums two weeks ago.

A leading finance company offered a special (apparently one-off) rate of 16.25 per cent at the same time. These interest rates are unavailable to the small investor. You need to be well-heeled to strike a special rate with the finance organisations.

Interest rates and government policy have to be considered against the background of two opposing elements in the present

monetary pattern. First is the continuing decline in growth of the money supply, the M3 monetary aggregate (defined as the notes and coins, demand deposits in those enterprises and "selected financial institutions" and in private sector credit expansion).

In the year to September 1979, M3 increased 7.4 per cent, M2 increased 8.9 per cent, and private sector credit expanded 24.7 per cent. Corresponding figures for August were 19.6 per cent, 24.1 per cent, and 24.1 per cent. The comparatively low rate of growth at the start of the "chain" (M1, M2, and to a lesser extent M3) will not, through private credit expansion, be coming months.

The second, and opposing, factor, is the effect of government policies in the taxation and welfare field plus other money arising from wage increases, backpay and so on. Tax cuts took effect from October while last week the family tax was increased to \$6 a week.

That pumps more money into the private sector, and causes a steady reduction in money growth.

The result is a constant movement of money flows and growth in the economy, as noted by the official bodies, but, as the Reserve Bank is, to the increasing number, small policy changes which have been evident this year.

Money supply growth is Government decision subject to the extent it is not constrained by non-bank private sector activity. The only influence on the money rate, unless one is a monetary theorist and they are a monetary theorist, but they are the monetary elements.

Changing monetary policy have to be read in the light of developments and other pressures on the economy.

## Analysing annual accounts

by Peter V O'Brien

TNL Group Ltd, the Nelson-based diversified tourist, transport, mineral and horticultural group, introduced another innovation this year to its traditionally informative annual report.

The company adopted a new accounting for its horticultural area of business. The table is compiled from the divisional breakdown. We added in "return on revenue" and "return per employee". The "return" in the corporate services division is rather anomalous, because it includes allocated head office costs and "the results of discontinued lines of business".

The table shows that passengers and tourist (the company's subsidiary) was the most profitable section of the group business, with the exception of return on revenue, where the exporting, farming and investment division produced a higher return on revenue and made the largest profit contribution per employee.

There seem to be two reasons for that division being well.

First, exporting, and probably farming, require few people for a high level of revenue and profit.

Second, profit relative to revenue would also be high, because the depreciation factor is lower in such business.

The asset investment offsets those advantages. TNL's farming activities include investment in horticultural

projects. The company says that no horticultural trading revenue was received during the year. Therefore the overall profit return on assets which produced no revenue is dragged down.

The table shows, perhaps surprisingly, that freight and contracting gave the second best return, when both categories are taken together, although the labour intensive nature of the business (only one man can drive one truck) reduced the dollar revenue and profit per employee.

Freighting did reasonably well throughout the economy last year, particularly those groups like TNL which have a strong base in rural cartage. Industrial disputes affected the division's profitability towards the end of the year, but improved rural conditions apparently gave the freighting business a sound base during the season.

The report refers to improved efficiency, which would also contribute to higher

profits in the division. The cost of vehicles, coupled with road user charges expected to reach \$2 million this year, put pressure on returns, but this section of TNL is making useful contributions to the total figures.

The problem of vehicle costs shows up in the company's statement of inflation adjusted accounts. The group used the Richardson Committee's system, modified by the Accountants' Society.

The depreciation rises from \$2,346,000 in the historical accounts to \$5,273,000. In 1978 depreciation in the historical accounts was \$2,543,000, moving to \$4,524,000 when adjusted for inflation.

The book value of depreciable fixed assets (which excludes land) was \$25.7 million, and coaches and trucks accounted for \$11.9 million (46.3 per cent) of that total. The depreciation calculation under current cost accounting is based on replacement costs, and the

ACTIVITY	REVENUE \$'000	NET PROFIT \$'000	RETURN ON REVENUE PER CENT	TOTAL ASSETS \$'000	RETURN ON ASSETS PER CENT	NO OF EMPLOYEES	REVENUE PER EMPLOYEE \$	PROFIT PER EMPLOYEE \$
Passengers & Tourist	21555	1859	7.81	12153	14.4	287	\$5188	\$212
Freighting & Contract	20813	1856	5.14	21481	5.4	802	\$2741	\$110
Minerals & Chemicals	7084	327	4.65	8748	5.1	187	\$3533	\$188
Exporting, Farming & Investment	1995	484	24.70	10088	1.7	34	\$5870	\$1620
Corporate Services	760	(1731)	-	3213	-	23	\$3280	-
<b>TOTAL</b>	<b>91653</b>	<b>3173</b>	<b>5.14</b>	<b>53500</b>	<b>5.03</b>	<b>1313</b>	<b>\$3140</b>	<b>\$261</b>

present prices of transport equipment are probably the main reason for the substantial lift in depreciation.

The company follows its usual practice of simple explanations (without screeds of print) on movements in balance sheet items, and includes a detailed breakdown of the taxation provision. The latter was \$826,000 last year compared with \$379,000 in 1978.

There are nine adjustments to net profit before striking the taxation figure, but they are

all stated, contrary to the practice of many other companies whose accounts are examined here.

TNL is still financially strong, in spite of the nil revenue contribution of various horticultural activities, which will become revenue and profit producing this year, and increase their returns at an increasing rate after 1980.

The proprietorship ratio (shareholders funds to total assets) was 57.9 per cent at

balance date, compared with 57.2 per cent in 1978. Cash flow (net profit plus depreciation and cash received from non-trading profits) was 10.56 per cent, as against 11.34 per cent in the previous year.

The return fell slightly, but it must be remembered that some capital investment, which was higher than in 1978, is still to produce profit. The return is still comfortable, after allowance for the modest decline, and sufficient to support the investment.

# Talking bears fruit: development scheme evolves

by Peter V O'Brien

THE country is seeing the evolution of "plans" for development, after a long period when people sat around talking about the topic. Four recent events suggest that before long we will be presented with a broad-based development scheme for the 1980s.

While the various matters taken together fall short of the detailed "roll-over" updated planning used in other countries, they are a change to the New Zealand style of doing things.

The first point is the operation of the Investment Unit in Trade and Industry. This was formulated in the 1979 Budget, and is designed to cut through the tortuous approval procedures in departments, local authorities and other bodies before an industrial scheme can go ahead.

It will be interesting to see what effect the persuasive powers of the unit has on any intransigent local authorities or the mass of other controllers who permeate the New Zealand landscape.

It is interesting to read the comments of Trade and Industry Minister, Iain Adams-Schneider, to the Christchurch chapter of Jaycees on October 26. Adams-Schneider told the meeting that the investment unit had dealt with 50 investment proposals in four months.

"Deal with" may not mean that the investments are imminent, because the time lag between initial talk on proposals and their commencement, or announcement, can be considerable.

The key point of the unit's success will be its ability to cover adequately the four "objectives" included in Adams-Schneider's speech:

- to assist investors whether local or overseas in researching their projects;
- to ensure that their applications for any consents necessary are processed with minimum delay by the central and local government agencies concerned;
- to develop proposals for streamlining consent procedures;
- to increase the number of investment proposals being made particularly in those areas of the economy where there is immediate scope for increased investment.

The second aspect of development is the much publicised National Development Bill. What

ever emerges finally from the select committee and Parliament, it will probably still be criticised. The final act, taken with other moves, will have an influence on the country's development over the next decade.

It can be read in conjunction with the idea of developing "proposals" for streamlining consent procedures.

Some critics of that bill seem to have their criticism misplaced, in a broad sense as opposed to questions of detail and safeguards for local and individual rights. On the one hand there is criticism of the rigidity required to set up an industrial project, while on the other, again broadly speaking, some critics of regulation and control are totally opposed to any

scheme to overcome the bottleneck.

Point three of the four mentioned earlier is also found in Adams-Schneider's Christchurch speech.

"In respect of identifying resources, my colleague Mr Lynch with his national development unit has set up a group, including a representative from my department, to prepare a 'catalogue of growth opportunities' to be distributed by the end of the year. This will define the scope for investment and new industrial growth in New Zealand including material on the areas of development I have already referred to. The preparation of this catalogue has helped focus the government's attention on untapped growth

opportunities as well as on impediments to growth."

At well, it takes time for things to happen, but here are some quotes from NBR this year.

February 14: (referring to a possible Industrial Corporation) "It would actively seek out industrial opportunities, utilising overseas investment either alone or preferably in partnership with New Zealand firms. It would promote New Zealand as an industrial site in other countries, particularly in the United States, Japan and Germany, and would act as the reference point for all projects from overseas."

March 14: "No doubt the government will cut out the 25 per cent requirement on overseas investment in New Zealand com-

panies. Will it actively encourage overseas investment apart from the recent negotiations with Germany? Will it break down the bureaucratic morass which requires independent decisions and approvals from 11 departments and authorities?"

March 21: (referring to PM Muldoon's "hot blast of reality" which has his chair "Widom three months the cabinet would set out publicly and in considerable detail, its strategy, as a comprehensive statement. That would be taking the people along with it. That would allow people to see where the politicians and administration were intending to take them. That would allow decision makers in all commercial enterprises to have a base from which to make their decisions.

Such a development would open up the national investment by those who have been with the policies since the past, but at least those, out alternatives, with private (the could question the's, rounding out a package, exact \$3.453 million, by a minor point.

Taken altogether, the points mentioned show at least we might be getting where in a sensible, planned, approach to our future, what public will get to see, that future looked upon.

## Stock and station giants consider economy with caution

by Peter V O'Brien

THE major stock and station groups held their annual meetings in the last week of October, and drew their usual attention from the sharemarket.

The pastoral base of the New Zealand economy makes the current assessments from these groups part of the analytical "inputs" for market observers.

The general impression from statements of the "big three" - Challenge Corporation, Dalgety New Zealand, and Crown Consolidated - is a reasonably profitable last quarter, a good year for farmers, including the next nine months, and considerable caution about the general state of the economy.

The main worry seems to be the cost of money, a worry which is unlikely to ease in the period through to mid 1980 (see article on page 12).

Challenge Corporation chairman, Ron Trotter, referred obliquely to interest rates in his comments on the private sale of wool outside the auction system. "With current high interest rates, an increasing number of farmers are not prepared to wait and have been selling their wool privately to dealers..."

Dalgety chairman Lyn Papps was, as usual, forthright in his comment: "The farmer will not be without problems. In view of further projected rises in farm input costs, restrictions on the use and increased prices of fuel oils which could materially impede farm development and severe competition for finance at reasonable rates".

INVESTOR INSIGHT

Red Weir of Crown Consolidated took a similar line through a reference to the effects of inflation: "Our greatest continuing problem is inflation with its ravaging effects on cost and liquidity. There seems to be no end in sight to the spiral and I see as a danger the possibility of acceptance of the attitude that double figure inflation is here to stay and that we must learn to live with it..."

"Meanwhile liquidity is under stress, and for companies like ours the high replacement cost of trading stocks is a significant contributory factor to this problem". Weir also referred to interest rates when answering farmer criticism of stock and station companies' commission charges for livestock and wool. He said that high interest rates affected Crown's results in the commission sale of livestock section of the business.

The companies are likely to feel increasing pressure on their farm finance activities over the rest of the year, as liquidity tightens in the

COMPANY	PRICE	1979 HIGH	1979 LOW	DIV (1978)

NZFC Co-op	102	112	81	7
Real Farmers	250	255	235	3

economy, interest rates remain at present levels and tax requirements come due in March. The Ministry of Agriculture and Fisheries reported recently (Current Agricultural Situation Report) that: "To some financial circles the mood of farmers is described as 'over confident' and there is little evidence to suggest that farmers are looking ahead to March when tax payments come due."

The report also said that the increase in credit from financial institutions to farmers will not all go towards growth. "Significant proportions will be taken up through increased costs and the financing of much higher valued livestock".

The last point has the usual paradox. The higher valued livestock internally results from improved export markets. They received another boost last week with the announcement that the Soviet Union is to buy 500,000 tonnes of mutton for shipment by December.

Sales in that market went regularly, but apparently not so early in the season. The price of 102.75 cents a kilo is considered good, given the recent slide in mutton prices.

When coupled with the frantic deal on lamb, such developments, plus the overall improved market should maintain livestock prices, and help the stock and station companies' commission income this season.

The sharemarket anticipated good results in the year ended June, 1979, and pushed share prices up steadily since January.

Consequently, much of the profit improvement had been discounted when it was announced. In addition, there has been a future discount in some cases, particularly Challenge.

That company's movement into the Tasman Pulp and Paper Co (considered a growth area in the 1980s) and its increasing attention to energy development persuaded the market that the group has several good years ahead of it.

"We've managed to cut down on our trolley theft..."

## Finance News

FINANCE Minister Rob Muldoon announced a new issue of New Zealand savings stock, with interest rate of 11.5 per cent, to open today and close on December 7. The savings stock interest rate offered is 0.5 per cent higher than the 11 per cent in the previous issue. The new stock will mature on October 15, 1984, but may be redeemed at one month's notice at any time after the offer closes.

## Company News

TRANS-ASHBURTON LTD reported an audited tax-paid profit of \$54,657 in the year to June 30, 1979, compared with \$51,804 in the year to June 30, 1978. The profit was a 5.2 per cent increase on the 1978 figure. The company's 1979 dividend of 5c per share was unchanged from the 1978 dividend of 5c.

PHILLIPS AND IMPEY LTD reported an audited group net profit of \$1,029,248 for the year to August 31, an improvement of 46 per cent on 1977-78 earnings. Directors recommended the final dividend be increased from 5c to 5.5c (11 per cent) payable December 11, vs November 21. That will make a total of 9.25c (1978, 8.75c).

TNL's profit for the year to June 30 increased 21 per cent to \$3,173,000. Industrial strife in the

THE WEEK

5.5c (11 per cent) payable December 11, vs November 21. That will make a total of 9.25c (1978, 8.75c).

MONTANA WINES LTD intends exporting wine valued at more than \$300,000 in the present financial year.

EBBETT WAIKATO LTD, the Hamilton General Motors car dealer, reported a net profit of \$201,526 (1978 profit: \$160,646). The tax provision rose from \$6250 to \$155,213, and a steady 12 per cent dividend is recommended. The earnings rate of 25.2 per cent covers the dividend 2.1 times.

HAIRAKI ENTERPRISES LTD effectively doubles its interim dividend after a 42.1 per cent

transport industry and a fall in Australian tourist numbers in the last quarter helped drag down the result.

DIC LTD recorded a net tax-paid profit of \$976,411 in the year to July 31, more than double that of the previous year. A final dividend of 8 cents is recommended, with the 7 cent interim, this makes a 21.4 increase on last year.

RADIO AVON LTD, the Christchurch private radio station, reported an 8 per cent increase in net profit to \$119,500, for the six months to September 30. It proposes a 25 per cent interim on the 25c par value shares (compared with last year's 15 per cent interim).

BRAMBLE BURNETT LTD recovered its profit by 40 per cent in the year to June 30, but chairman Noel Burnard expressed disappointment at the return on funds of 9.7 per cent.

PERMITS authorising the construction of 1315 new houses and flats with a value of \$37.8 million were issued in July 1979, a decrease of 18 per cent in number over July 1978 and a decrease of 25 per cent in value. The figure brings the number of dwelling units authorised for the 12 months ended July 1979 to 17,760.

Maori landowners of Tarawera forest, Tasmanian possibly will be struggling to maintain its relationship with the Maoris, anyway, as there appear to be several anomalies in the original agreement.

In apportioning shareholding based on the original land ownership, the cost of clearing the land of indigenous vegetation ready for planting was subtracted from its assessed value.

But since such clearance occurs only once, the Maoris shareholding has been severely reduced for all subsequent rotations.

The Forest Service no doubt will be insisting that Tasmanian stop its thinning its forests and instead gets on with the job of clear felling them, thus releasing state wood at a time when it could be in short supply.

The Forest Service stands to make far more from exporting such wood as logs than in selling to Tasmanian, even at \$16 a cubic metre though a spokesman from the marketing division of the Forest Service said there has been no suggestion of this.

Altogether, prospects for Tasmanian don't look bright. The Cumalco contract was rewritten in mid-term under threat of legislation but the Forest Service has waited patiently for its agreement to expire.

Massive increases in the cost of raw material purchased from the Forest Service appear inevitable. Increasing interest in issues of Maori land look set to cause Tasmanian just as many headaches.

## Manufacturing Statistics

THE Department of Statistics survey of manufacturing main indicators show that for the June 1979 quarter, as compared with the corresponding 1978 quarter, manufacturing sales were 22.1 per cent higher. Purchases increased by 28.6 per cent, salaries and wages by 17.6 per cent, other operating expenses by 14.5 per cent, gross capital expenditure by 40 per cent, and hours worked by 25 per cent. As at June 30, 1979, stocks of materials were 12.7 per cent higher and finished goods 12.0 per cent higher than at June 30, 1978.

## Why buy a Technical Computer from a Stranger when you can buy one from Hewlett-Packard?

HP equipment has been doing the job for engineers and scientists since 1939. This forty years of experience now pays off for you with the HP 1000 computer family. It reflects the knowledge we've gained of your needs in the laboratory and factory. For instance, our HP-IB interface bus makes it easy to use data from our instruments for sophisticated computations and control. And our experience with computer links on our own factory floor helped us develop powerful networking software for yours.

### Different computers for different needs.

So you don't pay for more computer than necessary, we offer a range of performance. This includes the economical M Series, with a 650 ns cycle time; the fast

E Series, and the powerful 350 ns F Series, with floating point processor.

They can all expand to 2 MB of main memory, are available with data base management software and FORTRAN, BASIC, Assembly and Microware languages.

We've also developed numerous devices to make these computers do more for your money. A measurement and control processor to take care of routine tasks without interrupting the CPU. A wide variety of general purpose interface cards, ranging from D/A converters to a 16-bit relay output register. A Multipoint communications package for stringing multiple CRT terminals on a single line. And a wide variety of graphics software and hardware to help you get the full picture.

### The HP 1000 is part of a bigger family.

The number of HP peripherals is growing by leaps and bounds. You can now build up your system with alphanumeric and graphic terminals, printers and plotting terminals, line printers, disc and tape drives, plotters and a variety of other data input/output devices - all with that reliable HP name on them.

So why don't you call or write us about the HP 1000 family and friends?

# Gundelach's diplomacy slow torture for NZ

Dear Mr Gundelach,

Brian Talboys, the Minister of Overseas Trade, is off to Europe this month to convince you and the Ministers of the EEC that New Zealand deserves a special place in the common market. In particular, he wants the EEC to guarantee that there will be continued favourable access for New Zealand butter and lamb.

When you visited New Zealand in May this year, you diplomatically sidestepped the issue of quotas. After firmly stating that the much-criticised common agricultural policy (CAP) is here to stay, you softened the blow by adding that the policy is open to adaptation and new realities.

But at that time, you would not commit yourself to what these new realities will mean for New Zealand. You blithely dismissed worries about our continued access by reporting that the Ministers of the EEC were under pressure to find a rapid solution to the butter

problem and that some imports of New Zealand lamb would continue to be needed and might even expand in the longer term.

You also undermined the special relationship between New Zealand and Europe. Apparently you spend more time on New Zealand affairs than on any other country involved with the EEC, including the United States. This special relationship is not just a matter of benevolence, but is based on a convergence of interest.

Then in June, soon after your visit to New Zealand, CAP imposed a high levy on New Zealand butter exports to England. New Zealand's Anchor brand was forced to sell at a price more than 10p below the subsidised European competitors. Interestingly, the price-conscious British showed some brand loyalty (butter is better, after all, but Anchor is better) and some sales were made despite the higher price.

But overall, sales of Anchor butter fell by a third during the first half of this year. And New Zealand has added another 20,000 tonnes to the 300,000 tonnes EEC butter mountain so far this year.

With friends like you, we don't need enemies. First you arrive in May to butter up the Government, asking it to be understanding about the problems of the EEC's common agricultural policy. Less than a month later, CAP policies slice into New Zealand's butter sales.

In our February 7 issue, our Economics Correspondent wrote an open letter to Finn Olaf Gundelach, the European Economic Community Commissioner for Agriculture. The letter was a plea for the hard news about access to the EEC before the costs of finding new export markets or products become too great. Nearly 10 months later, the EEC is on the brink of making some decisions about the New Zealand lamb and butter. And this further correspondence with Gundelach, a case is made for replacing diplomacy with business-like decisions.

Your diplomacy is akin to slowly torturing the New Zealand economy to a standstill. For years New Zealand has preferred the security of dealing with our friends, the British, to the unknowns of finding new markets and new products.

In many ways the British have benefited as much as New Zealand from this relationship. Our farmers have a comparative advantage and produce at prices below those paid to British farmers. It might have been possible to get higher prices for our agricultural products on other markets.

And, of course, it would be helpful if New Zealand could negotiate some stable access for butter and lamb in Europe. This would provide a base for us to develop new markets, if the new markets want to buy mainly agricultural products.

But while secure markets provide a base for developing new markets for our traditional agricultural exports, they also blunt our interest in looking for new markets. Talboys, for example, spends a great deal of his time negotiating with the EEC for continuing access which could be spent discovering and negotiating for new markets.

If you really want to help New Zealand, it is time to face up to the hard economic facts. New Zealand can provide butter and lamb at prices below those paid EEC farmers. But CAP's priorities do not favour the European consumer, they favour your farmers.

And your farmers have built up stockpiles of butter which must be dumped and your continental farmers are realising the importance of New Zealand lamb.

In short, as much as you would like to make New Zealand happy, you are in no position to do so at this time. If protecting your farmers has the intended result of making them more competitive, you probably will not need New Zealand dairy products in the future.

So, why continue to keep us on the hook? Why not take the opportunity of Talboys's visit to place him firmly in the picture about New Zealand's future with the EEC.

Naturally, it would be appreciated if you could provide

some good news along with the bad. For example, New Zealand's 20 per cent tariff on lamb is 20 per cent higher than the present 220,000 tonnes tariff. It is fair to all sides.

Of course, we would like to increase our lamb sales to the EEC, but this provides an incentive to develop the meat sales in Asia elsewhere.

Recently, New Zealand negotiated a contract with the EEC to sell 50,000 tonnes of lamb a year. A year ago, this contract would not have seemed possible.

And it would be a pity if New Zealand's butter quota was tied to the whole European Community, rather than just to the British market as it is. This way, New Zealand might be able to sell its butter despite the levy on butter.

It would be even better if the levy on butter could be reduced. New Zealand's quota may be reduced from 15,000 tonnes to 10,000 tonnes, which would be a real blow to our butter exports.

But if these arrangements involve only a short-term commitment from the EEC, New Zealand, it does not imply that some long-term arrangement may be made in the long run. All year the Government has been taking strong economic decisions to guide the economy into the 1980s.

Lately, the Government's main concern has been through a Development Bill which has been seen to be doing much about the economy before the next election in 1981. But at the same time they are developing new technologies, they are diversifying and expanding our agricultural base.

Mr Gundelach, you would do a great deal to help the Government progress in this direction.

Yours faithfully,  
Economics Correspondent

# Potential bad back rivalry pains physiotherapists

by Belinda Gillespie

If chiropractors are given the status recommended by the recent Inquiry Commission which investigated their activities, physiotherapists will be screaming with pain.

The commission suggested that both and compensation benefits should be available for chiropractic treatment.

A said also that the "medical status" which stop doctors referring patients to chiropractors are not in the public interest. Not only should chiropractors be accepted as part of the general health care system — the public should also have the right to consult them directly.

Back problems — the chiropractors' specialty — have been a pain in the neck for the Accident Compensation Commission. In the months to September last year, the commission paid out \$1,611,255 on 7790 claims for back sprains and strains.

The bulk of treatment for back sprains under ACC is done by doctors or physiotherapists to whom patients are referred. Because of their "ethic" doctors won't refer patients to chiropractors, though if they did, their fees could be claimed under ACC.

The commission concluded that, to get around the medical profession's reluctance to use chiropractors, chiropractic treatment without medical referral should be included under ACC. Chiropractors could not generate any greater number of claims as this established by the number

of accidents that give rise to the claims, it said.

Chiropractors who treated accident cases would therefore be receiving less instead of, not as well as, doctors and physiotherapists treating them under the present system.

Because of the superior skills of chiropractors, the commission argues, there could be clear financial advantages, not additional cost, in giving them a full part to play in the accident compensation system.

But a number of physiotherapists made hay under accident compensation, until the ACC tightened up its requirements for treatment earlier this year. Chiropractors who were allowed to treat accident victims without a doctor's referral might be equally tempted to abuse the system.

In May, ACC chairman Ken Sandford said it was necessary to exercise "greater surveillance" over the fees of physiotherapists. In 12 months one physiotherapist had received over \$100,000 from the ACC (though this sum in fact included Health Department contributions as well), and five had received over \$70,000.

Sandford questioned whether this was "the appropriate financial level" of physiotherapists within the community, and said that the ACC had imposed a "prudent business restraint" (a maximum of \$4) on the share it would pay of the physiotherapist's fee.

Last financial year physiotherapy services cost the ACC \$48 million, compared with only \$852,000 in the year ending March 1975.

In a letter to doctors and physiotherapists of May 1, the ACC set out its measures to try and control the rocking expenditure. Previously, a medical referral gave physiotherapists carte blanche on the number of treatments they could give. The ACC, from this date, declined to pay for more than 10 treatments without a further written referral. It also declined to accept as reasonable a fee more than \$4 an individual

service, unless special approval was given for a higher charge.

The limits were set after a statistical survey showed that the New Zealand averages were a fee of \$3.89, and a total of seven treatments in each course.

Although the New Zealand Private Physiotherapists Association waxed indignant at the new restrictions and particularly disliked the new referral form devised by the ACC, there was some medical support for the move.

A Wellington specialist, Blair Trendwell, wrote that was "disturbed when patients present unrelieved, after protracted periods of private physiotherapy".

In some cases this had amounted to daily attendance for six months, whereas in his view, physiotherapy which did not produce improvement in 15 treatments was "unlikely to be helpful and should be abandoned".

"It is regrettable that there are a small minority of private physiotherapists who persist with unproductive treatments for prolonged periods at great cost to the community and inconvenience to the patient," he said.

Furthermore, it seems likely that multi-million dollar bad back business would be lost to doctors and physiotherapists for good, while the chiropractors, as they say, would be on the pig's back.

Chiropractors who were allowed to treat accident victims without a doctor's referral might be equally tempted to abuse the system.

In May, ACC chairman Ken Sandford said it was necessary to exercise "greater surveillance" over the fees of physiotherapists. In 12 months one physiotherapist had received over \$100,000 from the ACC (though this sum in fact included Health Department contributions as well), and five had received over \$70,000.

## Kommercials are Kulture

JONATHAN Price is an American academic, theatre critic and video artist who claims that commercials are the "closest thing to video art on television."

His book, "The best thing on TV: Commercials" reflects his deep interest in the art form and the problems and technicalities of production rather than in the commercial effectiveness of the finished product.

Surprisingly, this book is directed at the general public, not a professional advertising man.

On first impression, it doesn't seem to be a subject for the layman but considering the tremendous audience exposed to television advertising in United States and Canada, where it was published last year, even a small degree of interest would provide a large market for a book on this subject.

"Commercials," writes Price, "represent the pinnacle of our popular culture's artistic expression. More money goes into their making, more

cash flows from their impact, more business thinking goes into each word than in any movie, opera, stage play or videotape.

"If commercials are artful, then the art is objective not subjective; capitalistic not rebellious; part of a social activity rather than a search for expression; more like a Roman road than a lyric poem. Their beauty is economic."

Part of the intrigue of the book lies in the examples of commercials which stud the text, many of them award-winners and, of course, old friends as far as the American audience is concerned.

Price takes his reader on the set to show how and why some of these extraordinary commercials were made and the result is akin to revealing a professional magician's best tricks.

For this reason the book looks local appeal in this market except, perhaps, for the sociologist who wants to see how the psychological wheels turn.

But for the professional adman, the book will be of absorbing interest.

To start with, he will probably have seen many of the commercials on Clio and

ADMARK

other demonstration reels and will have at least a passing familiarity with the subject of commercials.

Then the author covers those areas which are pertinent and applicable to the production of commercials everywhere.

Local producers will be interested to discover in the chapter headed "Almost obscene" that local censorship laws are more liberal in certain respects than those which apply in USA.

Men never put on underwear in American TV commercials nor women wear bras.

Thereof of emotion in selling has a tear-sprinkled chapter to itself.

There is a useful discussion

on testimonial advertising with Sir Laurence Olivier priced at \$500,000 per annum; the costs of production come under review (exceptional commercials can run past \$250,000); and the subject of advertising to children is a fascinating hodge-podge of truth and hypocrisy in conflict.

Some important background is found in the gut-felt views of various American creative people which have been assiduously chronicled by Price.

"The buzz word today is hard sell," he quotes Jerry Della Femina as saying. "You may hate those ads, and I may hate those ads, but the point is they work. They sell."

This is a slightly condensed quote from Walter Taplin. "Anyone who wishes to tell anyone about goods and services which may help him to spend his life in a fuller or more pleasant manner automatically goes far beyond the sphere of information."

"He is dealing with vague wants, unformed desires, and with an infinite field of alternatives, not one of which is essential."

"What is the good of providing facts about wine to a

man who has never tasted it? "The little measure, alcohol content, country of origin and price mean little to him."

"Even when he has tasted it, he may not like it. In fact, most of the things we want are not material but mental. We want states of mind."

"The advertiser, beginning with a material object which is to be sold, suggests the states of mind which may be achieved by the purchaser."

Carl Wrighter on ideas. "Given a good idea, words and pictures become almost secondary in importance."

"They are used simply to convey the idea. A good idea can stand on its own. Why is a good idea so hard to find?"

"First, because it must say something new and different about the product or something about the product in a new and different way."

"Second, because it must say something about you that's new and different or it must offer you a new and different point of view."

"It must be emotional in appeal, yet it must have a basic logic to it in order to make sense. And that's it."

And from George Lois, creative star. "I've never done commercials that didn't have words in them."

"I'll say the name of a product eight times. I'm working on a thirty-second commercial for a new magazine and I say the name of the magazine seventeen times in those 30 seconds."

"I design my commercials so I keep coming at you. Guys who design commercials where you don't hear, I think they're crazy."

"You know what a second costs on TV — two to four thousand dollars; you're not going to piss it away. I don't need money to get you into it."

Definitely not a book for the library shelf but one to be read by every guy and gal in creative.

"The best thing on TV: Commercials" by Jonathan Price. Published by Penguin Books 1978 in the United States of America and Canada.

## Children survive TV ad

FOLLOWING on the discussion on the effects of television advertising on children (Admark, October 24), we have received a copy of a research report by SSCB; Lintas, Australia, entitled, "Is TV turning your child into a zombie?"

A particular value of this report is that the research was conducted with children and represents their view rather than what adults believe the views of children to be.

From the section dealing with children and television commercials: "Commercials do have a role to play in children's lives as a means of knowing what is available for them to buy."

"But, commercials are only one of the ways that children learn about products, they also find out about them from friends, by looking in the shops and from school."

"Children say they love to try new products, particularly those within the buying realms of their pocket money and commercials tell them about new products — it can be said that it is encouraging experimentation."

"It is also apparent that children recognise a commercial as such from a very young age and usually have learned to understand the purpose of commercials by the time they are seven or eight."

"They certainly appear to be far less gullible and more critical than popular opinion asserts."

"Surely, the best and fairest summation of this complex subject has been made by Dr. Wilbur Schramm, Stanford University, in his study entitled, 'The Lives of Our Children: How they come to know the world, most tellingly, how they learn to buy things, is probably neither particularly harmful, nor particularly beneficial.'"

"Children appear to look on the announcement via television of a new product to be just as important to them as adults do, for a new model car

"Listening to these children makes it apparent that they are discerning, even at an early age — in some ways more so than adult consumers."

"If the product that is being advertised is disappointing — either in size or shape, for example, or if the price is not acceptable — children will not buy it again."

"The most persuasive form of advertising amongst children and adults for that matter is word-of-mouth. A product must live up to its promise from advertising or it will be rejected by this age group."

OUTWARD signs are that there is quite a trend to discounting in retailing. But to retailers themselves the word "discount" evokes thoughts of vaguely irritating approaches from trade unions, the drivers being the latest to give discounts to union members who produce membership books.

The irritation is qualified as vague because of the knowledge that among the few retailers who allow themselves to be drawn into the schemes, even fewer can recall a customer producing one of the books and asking for the discount.

This in turn discounts the value of the union's discount scheme. What point is there in being a party to a discount scheme if it doesn't produce much more in sales volume than it gives away in discounts?

To a large extent, retailer resistance to discount schemes in general defeats the union scheme's purpose.

The range of choice is still most important to a shopper, so what use is a list of retailers giving discounts if it is not long, comprehensive, and represented in every main shopping street?

Conversely, if the union's list is so complete, where would be the volume sales advantage for the shops listed?

The industry-wide discouragement of discounting, however, does not necessarily apply to the sales gimmick of raising yourself a discount store.

Some retail operations which would be most miffed if anyone thought their operations fell into the discount category, run subsidiary operations which regard as discount stores.

For example, in Wellington furniture retailer Radfords has as a neighbour, the Bond Store, which appears to be a furniture discount store.

In fact it is a Radfords operation. It is a matter of definition as to whether it is a discount store or a seller of cheaper furniture from cheaper manufacturers, while Radfords is a more up-market operation.

More identifiable is a menswear and womenswear operation which has moved into the old Air New Zealand premises in Wellington's Featherston Street. It is a discount store, selling off discontinued lines, broken ranges etc.

It's different from some of the seeder operators in this type of retailing because of its smart, even eye-catching decor. It is a joint Carter's Fashion Village - Peter Jackson venture.

L V Martin and Son are discounters of a sort, too. They don't discount big-name names, certainly not TVs, or the big whiteware

man who has never tasted it? "The little measure, alcohol content, country of origin and price mean little to him."

"Even when he has tasted it, he may not like it. In fact, most of the things we want are not material but mental. We want states of mind."

"The advertiser, beginning with a material object which is to be sold, suggests the states of mind which may be achieved by the purchaser."

Carl Wrighter on ideas. "Given a good idea, words and pictures become almost secondary in importance."

"They are used simply to convey the idea. A good idea can stand on its own. Why is a good idea so hard to find?"

"First, because it must say something new and different about the product or something about the product in a new and different way."

"Second, because it must say something about you that's new and different or it must offer you a new and different point of view."

## Retailers exercise trading skills redefining 'discount'

by Don Bryant

OUTWARD signs are that there is quite a trend to discounting in retailing. But to retailers themselves the word "discount" evokes thoughts of vaguely irritating approaches from trade unions, the drivers being the latest to give discounts to union members who produce membership books.

The irritation is qualified as vague because of the knowledge that among the few retailers who allow themselves to be drawn into the schemes, even fewer can recall a customer producing one of the books and asking for the discount.

This in turn discounts the value of the union's discount scheme. What point is there in being a party to a discount scheme if it doesn't produce much more in sales volume than it gives away in discounts?

To a large extent, retailer resistance to discount schemes in general defeats the union scheme's purpose.

The range of choice is still most important to a shopper, so what use is a list of retailers giving discounts if it is not long, comprehensive, and represented in every main shopping street?

Conversely, if the union's list is so complete, where would be the volume sales advantage for the shops listed?

The industry-wide discouragement of discounting, however, does not necessarily apply to the sales gimmick of raising yourself a discount store.

Some retail operations which would be most miffed if anyone thought their operations fell into the discount category, run subsidiary operations which regard as discount stores.

For example, in Wellington furniture retailer Radfords has as a neighbour, the Bond Store, which appears to be a furniture discount store.

In fact it is a Radfords operation. It is a matter of definition as to whether it is a discount store or a seller of cheaper furniture from cheaper manufacturers, while Radfords is a more up-market operation.

More identifiable is a menswear and womenswear operation which has moved into the old Air New Zealand premises in Wellington's Featherston Street. It is a discount store, selling off discontinued lines, broken ranges etc.

It's different from some of the seeder operators in this type of retailing because of its smart, even eye-catching decor. It is a joint Carter's Fashion Village - Peter Jackson venture.

L V Martin and Son are discounters of a sort, too. They don't discount big-name names, certainly not TVs, or the big whiteware

appliances, but generally they have a discounted-price policy for brown goods, storewide.

This does not worry their fellow retailers, who in their espousal of free enterprise have always insisted that a trader must use his own trading skills.

Woolworths are sometimes regarded as discounters in certain areas—for example in brand-name power tools such as Black and Decker.

Again it all depends on what you mean by discounting.

Woolworths, descendant of the five-and-dime, shilling store, or whatever, in fact still have the same old mark-up policy.

Only you can't really sell the old five-and-dime merchandise any more, even at 1979 prices. Small items, even at 25 or 30 cents, don't mean profits for variety stores at today's handling costs.

In other words you can't sell shoe laces, and pay the wages of the lady who refills the display stands, plus those of the cash-and-wrap operator, plus today's rents, rates,

power bills etc. and still make a profit. You'd probably lose a few cents on every sale.

So a few years ago the merchandising policy had to change. Bigger-ticket items had to be the story. Hence power-tools at traditional Woolworths markups. Oh, and one other change. This is one time you don't just pick up the

merchandise and march to cash-and-wrap point. You get someone to unchain it from the display.

It might be possible to call some furniture retailers discounters, in that they can reduce prices by operating from primitive, low-cost premises.

But again, it might be that many of them just sell lower-quality lines to achieve their lower prices.

There are others who merely say in a general way in their advertisements that their prices are cheaper — when they aren't. Anyone selling such operators discounters is really misapplying the term.

## The Lazy Man's Way to Riches

### 'Most People Are Too Busy Earning a Living to Make Any Money'

I used to work hard. The 18-hour days. The 7-day week. But I didn't start making big money until I did less — a lot less.

For example, this ad took about 2 hours to write. With a little luck, it should earn me \$50, maybe a hundred thousand dollars.

What's more, I'm going to ask you to send me 11 dollars for something that'll cost me no more than \$5.50. And I'll try to make it so irresistible that you'd be a damned fool not to do it.

After all, why should you care if I make \$4.50 profit if I can show you how to make a lot more?

What if I'm so sure that you will make money my Lazy Man's Way that I'll make you a most unusual guarantee?

**'I can't cash your check for 31 days'**

And here it is. I won't even cash your check or money order for 31 days after I've sent you my material. That'll give you plenty of time to get it, look it over, try it out.

If you don't agree that it's worth at least a hundred times what you've invested, send it back. Your uncashed check or money order will be put in the return mail.

The only reason I won't send it to you is...

**PROOF!** Don't take my word for it. These are excerpts from actual articles in newspapers and magazines:

These... He only works half the year in his cleaning office on California's Sunset Beach, and even when he's there he puts in short hours. In other words, Joe Karpis, 48, is the prototype for... "The Lazy Man's Way to Riches."

Seattle Times... Is it a secret? A man who has done this is excellent, and that he has managed to conduct himself beautifully with his wife and children, a handsome and a son and a daughter.

Want to be rich? Take my advice and follow this...

Los Angeles Herald-Examiner... The hotel has drawn hundreds of letters from persons who have profited by it.

Forbes... After bouncing around then his, advertising, and real estate, he made his fortune... Law year 1979 he made \$200,000.

Money Making Opportunities... Maybe Joe Karpis has the secret. Don't you think you owe it to yourself to find out what it is all about? I can furnish it — and I'm off on a journey myself. Get the idea?

Single Right... Many people have tried to duplicate Joe Karpis' success. California's answer to Philip Roth. The difference, forgetting what's right, is that Joe does what he does on personal initiative. He solves them...

The Boston Globe... Joe Karpis of Chico, Cal., told the paper... "The Lazy Man's Way to Riches" has "changed my life" and "spurred his business people design to build a new life for himself."

Long Beach Independent... "I've programmed the path to riches for the lazy man."

The Seattle Star... He plans, according to "The Lazy Man's Way," to start a new business in the next few months. He says he has already made a lot of money and is now looking for a way to do it again.

What does it require? Belief. Enough to take a chance. Enough to make all I'll send you. Enough to put the principles I've outlined. If you do just that — nothing more, nothing less — the results will be hard to believe. Remember — I guarantee it.

You don't have to give up your job. But you may soon be making a lot more money than you're making now. One word — I guarantee it.

The worst thing I've ever known people say to me is "You're a liar." I don't care. I'm not a liar. I'm a man who's made a lot of money and is now looking for a way to do it again.

you and tell you or send it to me because both these methods involve more time and money.

And I'm already going to give you 11 dollars for something that'll cost me no more than \$5.50. And I'll try to make it so irresistible that you'd be a damned fool not to do it.

O.K. — now I have to say a little I don't mind it. And it's necessary to move that sending me the 11 dollars, which I'll keep "in escrow" until you're satisfied — is the smartest thing you've ever done.

I live in a home that's worth \$250,000. I know it. Because I turned down as an offer for that much. My mortgage is less than half that, and the only reason I haven't paid it off is because my Tax Accountant says I'd be an idiot.

My "office" is about a mile and a half from my home, right on the beach. My view is so beautiful that most people comment that they don't see how I get any work done. But I do enough. About a hour a day. 8 or 9 months a year.

The rest of the time we spend on our mountain "cabin." I paid \$30,000 for it — cash.

I have 2 boats and a Cadillac. All paid for.

We have stocks, bonds, investments, cash in the bank. But the most important thing I have is priceless: time with my family.

And I'll show you just how I did it — the Lazy Man's Way — a secret that I've shared with just a few friends 'til now.

**'It doesn't require education, capital, luck, talent, or experience'**

It doesn't require "education." I'm a high school graduate.

It doesn't require "capital." When I started out, I was so deep in debt that I — my wife and I — had to bankrupt us as the only way out. We were wrong. We paid off our debts and, outside of the mortgage, don't own a cent to any man.

It doesn't require "luck." I've had more than my share, but I'm not proud of it. I don't think you should be either. I don't require "talent." Just enough brains to know what to look for. And I'll tell you that.

It doesn't require "youth." One woman I worked with is over 70. She's travelled the world over, making all the money she needs, doing only what I taught her.

It doesn't require "experience." A widow in Chicago has been averaging \$25,000 a year for the past 5 years, using my methods.

**'The results will be hard to believe, I guarantee it.'**

What does it require? Belief. Enough to take a chance. Enough to make all I'll send you. Enough to put the principles I've outlined. If you do just that — nothing more, nothing less — the results will be hard to believe. Remember — I guarantee it.

You don't have to give up your job. But you may soon be making a lot more money than you're making now. One word — I guarantee it.

The worst thing I've ever known people say to me is "You're a liar." I don't care. I'm not a liar. I'm a man who's made a lot of money and is now looking for a way to do it again.

What does it require? Belief. Enough to take a chance. Enough to make all I'll send you. Enough to put the principles I've outlined. If you do just that — nothing more, nothing less — the results will be hard to believe. Remember — I guarantee it.

You don't have to give up your job. But you may soon be making a lot more money than you're making now. One word — I guarantee it.

The worst thing I've ever known people say to me is "You're a liar." I don't care. I'm not a liar. I'm a man who's made a lot of money and is now looking for a way to do it again.

What does it require? Belief. Enough to take a chance. Enough to make all I'll send you. Enough to put the principles I've outlined. If you do just that — nothing more, nothing less — the results will be hard to believe. Remember — I guarantee it.

...I didn't have a job and I was worse than broke. I owed more than \$50,000 and my only assets were my wife and 8 children. We were renting an old house in a decaying neighborhood, driving a 5-year old car that was falling apart, and had maybe a couple of hundred dollars in the bank.

Within one month, after using the principles of the Lazy Man's Way to Riches, things started to change — to put it mildly.

- We worked out a plan to pay off our debts — and stopped our creditors from hounding us.
- We were driving a brand-new Thunderbird that a car dealer had given to us!
- Our bank account had multiplied tenfold!
- All within the first 30 days!

And today...

- I live in a home that's worth over \$250,000.
- I own my "office." It's about a mile and a half from my home and is right on the beach.
- I own a lakefront "cabin" in Washington. (That's where we spend the whole summer — loafing, fishing, swimming and sailing.)
- I own two oceanfront condominiums. One is on a sunny beach in Mexico and one is snuggled right on the best beach of the best island in Hawaii.
- I have two boats and a Cadillac. All paid for.
- I have a net worth of over a Million Dollars. But I still don't have a job...!!

every letter is in my files and can be checked by any publication, Radio or TV station, or government agency — and have been verified time and time again.

I'm sure that, like you, the people who wrote these letters didn't believe me either. Guess they figured that, since I wasn't going to deposit their check for 31 days, they had nothing to lose.

They were right. And here's what they gained:

\$260,000 in eleven months

Two years ago, I mailed you 11 dollars in sheer desperation for a better life... One year ago, just out of the blue sky, a man called and offered me a partnership. I was broke, my husband was in prison, my car was broken down, I had \$7 to my name, and we were \$25,000 in debt — and possibly more... It is now 18 months later. I am not a millionaire yet, but I am rich beyond my expectations. I have my own little business... and have received offers to buy my business from several national and international distributors.

Barbara A.

**'I had nothing to lose'**

"I had nothing to lose, I wouldn't have believed it... A few years ago, I had nothing to lose. I was unemployed and broke. I didn't even own a car and I lived in a cheap apartment. My total assets were half of what they are now. I made enough money last year (41) to retire in style. Let me assure you that I have not come into any money by inheritance or marriage or by any other means except through the principles of your program."

R.A. Huntington Beach, CA

**'Thought it was just another ad'**

"I want you to know just how great I think it is. My only regret is that I held off ordering it so long because I thought it was just another ad."

W.B. Hamilton, Ontario, Canada

**'Can't handle all the business'**

"I can't handle all the business. I've been hired from my \$50,000 a year job as president of a company. I've been hired from my \$50,000 a year job as president of a company. I've been hired from my \$50,000 a year job as president of a company."

What does it require? Belief. Enough to take a chance. Enough to make all I'll send you. Enough to put the principles I've outlined. If you do just that — nothing more, nothing less — the results will be hard to believe. Remember — I guarantee it.

...

## Retailers take cautious approach to Christmas

by Belinda Gillespie

THE Australians are going to spend up large this Christmas. Hard times or not, retailers there are expecting a bonanza.

That's the word from across the Tasman, where the pubs are booked out for Christmas, jewellery is selling like hot cakes, and sales of caravans and power boats are looking up after two sluggish seasons.

On the home front, the boom is likely to be more muted. Reductions in income tax, double family benefit and the big back pay for the Public Service should have been enough to get New Zealanders throwing their money around the market-place.

But there has been no big splash, and retailers are counting on a Christmas season no better than last year.

Christmas starts on December 1 here, declares Alan Moyné, Woolworths' Wellington regional manager, and it's always good for business.

From August on, people start putting toys on layby, and

WINDOW ON RETAILING

Christmas cards begin to sell in the week before overseas mailings close.

Woolworths experienced no splash in sales after the big public service backpay — Government employees may have been made cautious by the PSIS collapse.

But there's plenty of money about, and Moyné is certain that the shops will see it in the end.

Kirkcaldie and Stains Ltd, a Wellington department store in the expensive bracket, has

bigger expectations than last year.

Kirkcaldie's clients, claims managing-director John Barr, are "discriminatory" buyers who don't throw around their money.

He wasn't surprised, therefore, when there were no signs of a big splurge after the back-pay.

But at this stage he is confident of a good Christmas, with the pattern of retail buying much the same as previous years.

Farmers Trading Co had one of its best Christmases in 1978, and hopes to equal it this year.

Sales volumes in real terms meet last year's levels, says Farmers' general manager A T M. (Tas) Williams, but September wasn't as good as 1978, and October sales are down.

Sales of major home appliances and colour televisions — the segment most sensitive to the economic climate — have slowed.

But all indications are that wage and salary earners, with

extra money in their pockets, will spend at least as much as usual.

Speaking for the industry as a whole, Retailers Federation Barrie Purdie will be surprised if Christmas is not a record, even taking inflation into account.

The "depressed" atmosphere of 12 months back has vanished; there are reasonable stocks of merchandise on hand, and public servants in particular have a fair lump to spend between now and Christmas.

There is nothing to show that people are about to embark on a wild spending spree.

The statistics don't lie, and the figures for small savings show that many people are squandering away their money.

In the April-June figure for this year, \$2280 million was saved, compared with \$1889.2 million for the same period last year.

Spending last year was actually down \$4 a head on 1978, Purdie pointed out, and the situation is even worse

when the decline in population is taken into account.

Frederick Frost, retail manager of the PSIS, agrees that the bankers, not the retailers, were the ones to see the colour of the public service back-pay.

But business generally has been buoyant since the major pay-out was made, with a more even spread of trade than after previous back-pays, which have been followed by sharp increases in spending.

Present trends suggest the Christmas 1979 will be very good, says Frost — and PSIS could do with a good year.

Pique among the public service clientele after the rebate variations of November last year made Christmas one that PSIS stores would prefer to forget.

## Seasonal sales begin an upward turn

TOYS give an early indication of how business is shaping up for Christmas, and wholesalers and retailers report that sales are picking up.

"With the amount of money in the market we can't go wrong," according to Dixon MacMillan, of Toyworld, a cooperative which supplies 54 retailers throughout New Zealand.

Electronic toys? The craze hasn't hit New Zealand yet.

"We're 18 months behind the Australian market—anyway the duty's so high it's prohibitive," MacMillan said. C C Toop and Co, an importing offshoot of LD Nathan, reports an increasing demand for the more sophisticated and educational type of toys, and a "terrific demand" for the few electronic toys that do come in.

Jewellery, regarded as a hedge against inflation, has benefited in sales terms both from the ballooning economy and the jump in gold and silver prices.

With business good but not extraordinary and stock in hand increasing in volume, jewellers are looking forward to Christmas with some optimism.

Graham Brown, vice-president of the New Zealand Jewellers' Association, said there had been a mild rush on gold jewellery after the first big jump in gold prices, but sales were now back to normal.

From "doom and despair" of the beginning of the year,

retailers' confidence had been restored by a year's good trading.

On the other hand, the prospect of replacing sales in the New Year will present trade with severe liquidity problems.

Leaping gold prices are replacement coils will be phenomenal.

On the wholesale side jewellers report a swing away from cheap trinkets to quality jewellery, with sales of precious stones like garnets and amethysts going well.

Trade has been buoyant this year, despite the pessimism and a couple of slow months in June and July. But the Christmas trend has started yet.

Silver is where the action is, according to Trevor Scott, a Silverline.

The price of silver has tripled in the last year, and the market for silver jewellery "has gone mad".

His company manufactures for jewellers all over New Zealand, as well as its own outlets, and is beefing up production for the expected heavy demand at Christmas.

Gold and silver dealers have restricted sales of bullion since the price manufacturers since the price rises—Import licences are issued on the basis of value, not weight, so the quantity coming into the country has gone down, and the trade has shortages in both metals, even though speculators have been kept out of the market.

## Vacationers rush into holiday bookings

by Belinda Gillespie

PEOPLE can always find money for holidays—that's the philosophy at Flag Inns, where business is picking up rapidly and most motels are booked out for Christmas.

After a lull in Australian bookings following the period of cut-price fares across the Tasman, travel to Australia is picking up again, and Flag is seeing tourists in to the remaining accommodation.

Other hotels and motels report an "average" Christmas so far, with bookings about the same as last year but for accommodation and dining.

The Government Tourist Bureau says "same as last year" for accommodation and travel, while Air New Zealand reports that business is "very healthy", particularly in international traffic to Britain, Australia and the Pacific in December and January.

There is still plenty of space on domestic flights, but this is normal—people generally finalise about four weeks before their departure dates.

Uoa Breweries is worried about beer, but otherwise expects a happy Christmas.

"As manufacturers," says P R man Des Fitzgerald, "we expect beer sales this Christmas to remain stagnant".

Beer drinking has declined about 4 per cent in each of the last two years.

The reasons are economic—the beer drinker is the first to get affected by price rises which don't hit the well-heeled wine buff, and the high tax on beer makes it a becoming relatively cheaper to drink wine.

But liquor graphs for accommodation are showing an upward trend, and sales of liquor and food are improving in dollar terms.

Bottle store and lounge bar sales are down, while wholesale liquor, public bar and restaurant turnover have improved.

Retail liquor merchants report improving sales, following a deathly hush in the post-Budget period. Like other leisure retail trade, they have seen no signs of the Public Service back-pay, but

BEER SALES... slipped to remain stagnant

are hopeful that people will put their hands in their pockets as the festive season approaches.

The only gloomy note for a Christmas regarded with quiet optimism by other traders comes from caravan land.

Holiday-makers will be toasting the new decade in wine from their motel units, while those who celebrate with beer in caravans will be against the trend—such is the effect of the sales taxes.

Evidence of the caravan industry's troubles is writ large in the registration figures—202 and 189 new registrations in August and September this year, compared with 403 and 566 in the same months of 1978.

While a total of 800 units was registered last December, the industry's expectations are no more than two or three hundred this year.

As well as the sales tax, slow government answers to the questions of whether petrol restrictions and carless days will be modified over the holiday period are blamed for flagging interest in caravanning.

A cloud over caravans could mean a silver lining for tents. The retailers are expecting a boom in sales of camping gear, as people move out of caravans and under canvas. At this stage gear is only just starting to move, and traders are keeping their fingers crossed that their hopes will be fulfilled.

## Plastics firm wins industry accolade

by John Draper

A SPECTACULAR thirteen fold increase in exports in four years is making Feilding-based Wrighteel NZ Ltd, the toast of the plastics industry.

And if the tasting wine is drawn from a pack then it is almost certain to be in a Wrighteel product.

Laminating plastic is the firm's speciality, originally for cheese, more recently for wine and now for anything needing a leak proof container — from liquid detergent sachets to fruit juice.

In the early 1960s managing director Les Evans set up Wrighteel's Feilding plant to manufacture wrapping for bread and rindless cheese.

A country town with a stable and available workforce near the geographical centre of the firm's main customers was a deliberate choice. Feilding has benefited since, with 79 workers now employed at the factory.

Despite Evans claims to being the world's worst

salesman, the company has succeeded. It quickly earned 85 per cent of the rindless cheese wrapping market and half the bread wrappers.

Advancing technology however, turned the cheese wrapping business sour. "We fell out because our wrappings had to be manually applied and were becoming uncompetitive with other methods," Evans said.

Production stopped. Bread wrappers, never a high profit maker, were also thrown out for being too sale.

Two years ago, Wrighteel's Australian associate was having problems with plastic wine packs. Wrighteel took the product, improved it and is now winning big export orders from across the Tasman for it.

The secret is a three-walled laminated plastic container. Production manager Oon Kline claims the packs are less leakproof than traditional glass bottles. Two in every hundred are tested to destruction to make sure the company's reputation for a

maximum failure rate of .03 per cent is maintained.

The carton market is big, 14 million a year in Australia and 1.5 million locally. There are two sizes — the retail six bottle pack and a 20 litre pack for the hotel and restaurant trade.

In Australia, Kline says wine drinking has already drunk beer under the table and he claims the Kiwi beer drinking image will soon suffer a similar fate. It will all be good business for Wrighteel, though it is not alone in the market.

But Evans lays claim to being the best.

"We do not sell," he said. "We do not aim to be the cheapest in the market. We will perform and give satisfaction and in the long run we will be the cheapest."

And Wrighteel's reputation for being the best is winning it export orders for another product, wine pack taps. The taps are moulded under

licence from London-based Waddington and Duval Ltd and are an important part of the pack.

It has to be airproof to stop the wine going off — part of the selling power of the wine pack is its ability to keep for up to six months under refrigeration once tapped. Taps must also be designed to make sure wine cannot be trapped and exposed to air when turned off.

The Waddington-Duval tap as perfected by Wrighteel fulfils both requirements. The Feilding firm is now supplying the original maker.

And for its remarkable export successes the firm, which is ultimately a subsidiary of British Chemical giant, Courtauld, was awarded the Plastics Institute's Export Award.

For the year to May 1980 the firm already has export orders worth \$1,289,000.

## SUCCESSFUL COMPANIES. SUCCESSFUL MANAGERS. FINANCIAL DECISION-MAKERS.

**IDAPS COMPUTER SCIENCE (NZ) LTD** has won the **SOFTWARE INTERNATIONAL** agency because IDAPS is a successful New Zealand company

### SOFTWARE INTERNATIONAL

Simple report writers allow you to design your own custom-tailored reports. You can produce multiple budget simulations alongside historical performance figures for more successful financial management—you have as many options as you want on which to evaluate future success for yourself and your company.

- ☐ General Ledger and Financial Control.
- ☐ Accounts Payable and Expense Analysis.
- ☐ Accounts Receivable and Cash Management.
- ☐ Fixed Assets and Property Control.

### SOFTWARE INTERNATIONAL

has over 2300 customers in 34 countries who, faced with a choice of writing their own systems or buying from Software International, found the decision an easy one.

# Building societies seek Reserve Bank backing

Melbourne Correspondent

ACCORDING to the auditors of Melbourne's Eastern Suburbs Building Society it has lost \$408,000 in the last three years through financial mismanagement.

Undoubtedly their report will strengthen the case of those who have long advocated greater regulation of Australia's permanent building societies.

Critics argue that they can hardly be described as well regulated, when one prominent building society has to be protected from a run by a State Premier at South Australia with a loud hailer, and another in NSW is threatened by the collapse of a radio talkback programme.

Earlier this year a Sydney radio station broadcast a rumour that a leading Australian building society was about to collapse. In the panic induced by the broadcast, investors withdrew \$414 million from the St George Building Society — the second largest in NSW.

It had assets of \$4800 million, a statutory profit reserve of \$415 million, and \$200 million liquidity.

Nonetheless the announcement that a major building society was "going to bust" sent hundreds of investors into the society's branch offices in Sydney to withdraw their savings.

The run was only brought to an end by the hurried personal appearance of the NSW Premier, Neville Wran, at the society's headquarters.

The nervous haste with which he came to the rescue of St George may well have been stimulated by the collapse in 1977, of the Queensland Permanent Building Society.

The 140,000 small investors saving with the society, which held \$4150 million of the public's savings, were stunned by a sudden announcement that the society could not pay its bills.

At the time the Queensland Treasurer said that a series of Parliamentary remarks had caused an \$418 million run on the Queensland Permanent.

THE AUSTRALIANS

The run had so eroded its liquidity that a liquidator had been appointed. The collapse of the Queensland Permanent was the biggest failure of an Australian savings institution in modern history, and underlined the frail liquidity base on which some societies have built.

Following talks between the Federal and State Governments arrangements were made for the Reserve Bank to make available \$4150 million to fully match demands for withdrawal of depositors' funds.

It was the first time the Reserve Bank had publicly given direct open support to a building society faced with a run. However it is believed that the Reserve Bank had given secret support, some years ago, to NSW societies faced with massive withdrawals.

For all this de facto support of building societies in trouble, there is no statutory obligation for the Reserve Bank to provide lender of last resort facilities.

In its submission to the Campbell enquiry into Australia's financial system the Association of Permanent Building Societies now proposes that the Reserve Bank should be required by statute to provide such facilities.

They would then enjoy the same support from the Reserve Bank as their chief competitors in the home lending market — the savings banks. If the Reserve Bank Act is amended to provide the building societies with lender of last resort facilities, then

they will likewise be offering the public insured deposits.

Unlike the savings banks they are not governed by the restrictions on interest rates imposed under the Banking Act, and usually offer interest on deposits at one or two per cent above the maximum rates the savings banks are permitted to offer.

In effect the implementation of the permanent building societies' proposal would convert them into quasi-savings banks offering far more attractive rates of interest to the public than the savings banks themselves.

Either of two measures would ensure equitable competition between banks and building societies. The first would be the deregulation of the interest rates of banks, and the second would be the deregulation of the interest rates of the building societies under the Banking Act.

The paradox is that the latter would be their rapid way to the rescue, but the former would be their ability to attract funds through higher interest rates. The latter would be their permanent advantage, but the former would be their major disadvantage.

## Treasury advocates decontrol of insurance

THE Australian Treasury, which drafts the country's insurance legislation, has proposed the deregulation of Australian insurance.

In its submission to an inquiry into Australia's financial system, it strongly opposes the notion that any further legislative controls are necessary to protect the consumer.

The Treasury argues that existing legislative control of Australia's insurers may even be working against the interests of the consumer.

General insurance companies operating in Australia must be authorised by the Insurance Commissioner in accordance with the provisions of the Federal Insurance Act.

Similarly, life insurance companies must be authorised by the Life Insurance Commissioner.

The Treasury submission says: "The existing arrangements, by giving all companies the status of authorised insurers, may in fact be discouraging sufficiently careful assessment of the strength of companies... the answer to this is not necessarily more regulation. It could in fact be less."

In particular, Treasury has clearly expressed its opposition to any licensing of Australian insurance brokers.

This move runs counter to the views expressed by influential sections of the Australian insurance industry and the Federal Law Reform Commission.

In December last year a major Melbourne broking company went into voluntary liquidation owing creditors an estimated \$41.09 million.

The Corporation of Insurance Brokers of Australia, used the occasion to call on the Australian Government to protect the public from the failure of insurance brokers.

CIBA national president Frank Laird said at the time his organisation had since 1969 repeatedly warned successive Federal Governments of the consequences of failure to control Australia's insurance broking industry.

Such control, he said, would also "prevent wholly undeserved suspicion falling on those members of the insurance broking industry whose conduct is beyond any reproach".

There is little effective control over what an

Australian insurance broker does with funds he receives from clients before paying them on to the insurer. So far the Australian Federal Government has ignored all proposals for warnings on this sort of problem.

In what may well be construed as a calculated move both to the CIBA and to the Federal Law Reform Commission, the Treasury proposes a system of voluntary accreditation, by which minimum professional standards could be laid down for those brokers who voluntarily seek accreditation.

Having rejected the notion that non-licensed brokers should be prevented from practising, the Treasury has proposed the Australian public assume for itself the task of dealing with the registered broker.

The increase in the cost of life insurance policies is currently about 10 per cent, and is a matter of concern to many Australian consumers.

It suggests that insurance companies and individuals free in future to enter into insurance contracts providing for lesser, and even to surrender value, in return for a lower premium or other benefits.

The Treasury also rejects a suggestion made by the Life Insurance Commission that insurance companies be obliged by law to provide summaries in plain language of insurance policies to consumers.

It says: "To the extent that consumers want or need additional or new forms of information and are willing to pay for them the market can be expected to respond appropriately."

In this, as in much else, the Treasury is plainly at odds with the Law Reform Commission's proposals.

It is even more difficult to reconcile its sudden espousal of deregulation with the 1977 report to the Insurance Brokers' Council of Australia, by Treasurer, Howard, which promised personal supervision of its long-standing campaign for Federal Government legislation to control insurance broking in Australia.

# UK Royal Commission's pointers to law reform

by Jack Hodder

LAWYERS generally are accepted as a necessary evil. Just how necessary (and how evil) is a question that has been occupying the Royal Commission on Legal Services in England, Wales, and Northern Ireland for the past three years.

The commission's 864-page report released last month was generally flattering to the legal profession.

The commission was set up by Sir Harold Wilson, over the objections of the responsible Minister, Lord Elwyn-Jones. Its chairman was a leading City of London accountant and veteran of official inquiries, Sir Henry Benson. Among the other 14 members were Wilson's press secretary, Joe Haines, the UK Consumers Association director, Peter Goldman, the London School of Economics head, Ralf Dahrendorf.

There were only four orthodox lawyers to judge, a non-practising QC, and two solicitors.

The commission's report is comprehensive but far from radical. It has been praised by the legal trades union (one of which, the Law Society, estimates that its costs in participating were \$500,000).

Others have been less impressed. The Financial Times, for example, thought it could become "a classic text on the complacency which pervades British society".

The report is relevant to New Zealand. Apart from the fusion of barristers and solicitors in this country, our legal profession is very much English-based.

Further, our legal services are under official scrutiny. The new Law Practitioners Bill is due for introduction next year and the Justice Department is in the middle of a review of the various legal aid schemes.

Conveyancing: "Closed Shop"

Conveyancing, the legal aspects of the transfer of title to land, has been limited to solicitors in England since the end of last century. This "closed shop" in phrase used by the commission in preference to "monopoly" has been adopted in New Zealand and is protected by statute.

Much conveyancing is uncomplicated and carried out by unqualified staff in legal offices and the closed shop has been regularly criticised from outside the legal profession.

Whether to retain this closed shop was one of the principal issues facing the commission, which observed that the purchase of a house was the most expensive transaction in most people's lives.

It was emphatic that the client of a conveyancer must be protected from dishonesty, negligence, ignorance, incompetence, and unreasonable charges.

It concluded that the organised solicitors' profession and do-it-yourself conveyancers met these criteria, that a "free-for-all" would definitely not be in the public interest, and (by a majority only, with five vigorous dissenters) that neither a system of licensing nor the creation of a new profession of conveyancers would provide increased competition or lower charges if the high standards required of solicitors were (as they would be) demanded.

The majority's conclusion on this point was reinforced by evidence of competition between solicitors since the abolition of the fixed scale of

charges in 1973. (A fixed scale remains a feature of the New Zealand legal profession).

Apparently fees payable by the purchaser of a \$40,000 house range between \$280 and \$620 in England.

The commission recommended a system of non-compulsory standard charges. Solicitors could charge less than standard rates (and advertise the fact) but could charge more only with the client's prior approval.

The majority thus recommended that the existing closed shop be retained, extended (to the preparation of contracts for sale) and strengthened (by increasing the penalties for conveyingance for reward by non-solicitors).

Dissenting commission members claimed that the connection between solicitors and conveyancing was not sacred (having arisen in 1804 as a convenient way for the Government to collect stamp duty), that innovative and healthy competition was in the public interest, and that the economies of the legal profession had been distorted by reliance upon conveyancing for income.

It was said that in an area of high property values (for example, Bournemouth) the ratio of solicitors' offices per head of population is 1:2000; in deprived areas of Merseyside the ratio was 1:67,000.

Advertising

The question of advertising by the legal profession as a method of increasing competition was considered by the UK Monopolies Commission in 1970 and 1976, which found that the profession's restrictions of advertising were against the public interest.

The Royal Commission agreed: The most important interest was that of the potential client in being aware of the availability of legal services.

But again, no "free-for-all". Advertisements by individuals or firms would be regulated by the Law Society, could not refer to the quality of service, to the number of staff employed, to the other clients, or to the ease and fee of income of the practice.

Lawyers' charges and income

The commission found the remuneration of solicitors and barristers generally in line with remuneration in comparable occupations. Exceptions to this were a widespread inadequacy of pension provisions, low earnings for young barristers and for salaried solicitors employed in private practice.

Criticism of high fees commanded by barristers, specialising in defamation, commercial, tax and planning matters were made to the commission, but it regarded this as a reflection of the market.

The commission's consultants found that whereas 91.7 per cent of junior London criminal barristers' fees were derived from public funds, senior Chancery and specialist QCs derived a mere 1.5 per cent of their fees from public funds.

Dealing with solicitors, the commission recommended the cessation of the practice of buying and selling goodwill as between incoming and outgoing partners and regarded that overhead expenses accounted for 23.3 per cent on average of solicitors' gross income.

The sole practitioner and the large (10 or more partner)

THE LAW

firms were found to have the highest overheads.

Time recording and costing as the basis for solicitors' charges was strongly endorsed by the commission as improving efficiency, the standard of service and the practitioners' profitability.

It cited a small firm in a depressed area of London with a practice comprising mainly welfare, law and legally-aided work which was able to pay above average remuneration to all staff because of the care taken in establishing and managing a time costing system.

Time costing was also seen as a means of enabling a solicitor to give reasonably accurate estimates of work to clients at the outset.

In any event, the commission recommended, a

solicitor taking instructions should be under a professional duty to promptly inform the client in writing of the basis on which charges are made, that he may set a limit on the costs to be incurred without further authority, that the final bill may be reviewed by an impartial body, any possibility of liability for an opposing party's costs having to be paid, and on estimate if possible.

Three Discriminations

"A failure to remove even the appearance of discrimination from the legal profession reduces the confidence of every sector of the public in the fair administration of justice." So said the commission of the beginning of its chapter on race and sex discrimination in the profession.

It saw sex discrimination as disappearing (albeit slowly) but was disturbed at trends in relation to race discrimination.

Apart from the overall under-representation of ethnic minorities in both branches of the profession, the commission feared the development of "ghetto" practices where practitioners would receive work solely from their own ethnic community.

These lawyers would have little informal contact with those outside that community and would produce a clear division on racial lines in the practice of the law.

The commission called for a major voluntary effort by the profession and its governing bodies to ensure that all racial groups enter and practise on equal terms.

The alternative was compulsory measures and, in the absence of voluntary progress, the problem warranted their implementation.

A large part of the commission's report is taken up with matters that will require a substantial increase in public funding of legal services: A national system of Citizens' Advice Bureaux; Citizens' Law Centres in areas ill-served by private practices; and a widening of the availability of civil legal aid (to encompass middle-income earners and tribunal work).

The report says that improvements in efficiency within the legal profession cannot remove the fact that legal services involve highly-skilled and time-consuming work — that is, the law will remain expensive.

The questions are: Who is going to pay for it, and who will not have the benefit of it?

The Royal Commission on Legal Services cost British taxpayers around \$2,500,000. No New Zealand has not needed a similar expenditure of time and effort to be shown that, while the fundamentals may be in place, the legal services system is due for important reforms.

## New! Monocoustic panels lower the ceiling price on thermal insulation.

Monocoustic panels set the limits for thermal and acoustic insulation. For installation costs. For damage and replacement costs.

Light, thick, AHI Monocoustic ceiling panels. LIGHTNESS means simple, speedy installation. Quick easy shaping around ducts and fittings. AHI Monocoustic paneling is one of the lightest systems available. Designed to stay up once it's been put up. Therefore also one of the safest.

Building code NZS4203 controls seismic bracing standards for suspended ceilings. If anything does come down it mustn't come down with a crash. So Monocoustic's a load off your mind — end off your pocket. There's no expensive, rigid bracing required.

THICKNESS means insulation. Thermal and acoustic. The first keeps heat in. Once you've installed a Monocoustic panel ceiling, all the insulation you'll ever need is in place.

Limiting heat loss. Providing worthwhile energy savings. You need absolutely no other insulation. MORE IMPORTANT THAN EVER WITH NO CEILING PRICE ON POWER.

Another cost benefit. The whole cost of installing thermal insulation material in commercial and industrial premises is tax deductible. AHI Monocoustic Ceiling panels qualify for that rebate.

Acoustic insulation dampens sound within a room, making an office, a meeting room, even public places so much quieter. Easier to work in. Better for everybody's concentration.

The lowered noise level also means it's quieter in the room next door. However, there's another side to Monocoustic panels. The one facing the room. Looks good too.

An attractive, textured vinyl surface that gives good light reflection. A very important factor in offices and other working places. A surface that cleans quickly and cheaply with a damp cloth and soapy water. And never needs painting.

There are still more advantages to Monocoustic panels. Less obvious, but just as useful. No risk decision.

AHI Fibreglass Monocoustic Ceiling Panels. Putting a top limit on heat losses — lowering ceiling system costs.

# Exchange rate adjustments have implications for farmers' future finances

by Colin James

THE automatic exchange rate adjustment mechanism, introduced in the Budget to maintain exporters' profitability and real incomes, by itself will not necessarily ensure that farmers maintain their position.

To ensure that they do, and to account for structural changes, movements in invisibles and other factors, the other "leg" of the Budget's flexible exchange rate policy — discretionary additional changes in dollar parity — will need to be used.

These are the broad conclusions of a paper presented by Reserve Bank economist Arthur Grimes to an economists conference.

Grimes says they are his views; they do not necessarily reflect those of the Bank.

The automatic exchange rate adjustment policy, which has led to small downward adjustments of the dollar totalling roughly 1.5 per cent over the past four months, is designed to affect any excess movement in New Zealand exporters' costs compared

with those of our trading partners. In other words, as Finance Minister Robert Muldoon said at the time: "This will ensure that in future exporters' profitability and real incomes are not eroded by local inflation."

But this mechanism does not automatically take into account changes in foreign prices for agricultural products which are still our principal export earner and likely to remain so for some time.

The long-term trend over the past two decades has been for these prices to fall relative to those for manufactured goods — and relative to farmers' costs.

Thus, if New Zealand had relied only on the automatic adjustment mechanism during these decades, manufacturers' export competitiveness would have been maintained, but farmers would have had to battle an adverse trend in their terms of trade.

This is confirmed by Grimes' findings. It raises an important question for the future: if farmers' prices on foreign

PRIMARY INDUSTRY

markets continue to rise more slowly than those for manufactured products over the long-term, what do we do about farmers?

Do we let them rot, let the market encourage them to change their ways, subsidise them, or devalue?

Grimes sees a role for the second "leg" of the flexible exchange rate policy — the discretionary adjustments, which Muldoon said in the Budget may be required by "structural adjustments of the economy to changes in our international trading

relationships". Whether that will be interpreted to farmers' benefit remains to be seen. In his paper Grimes analyses the changes in competitiveness of New Zealand manufacturing exporters from 1968 to 1977.

He uses a similar weighted basket of foreign currencies to the one used in the new automatic procedure.

Grimes calculates a unit labour cost index for each country from industrial production, industrial employment and wage rates.

Comparing these rates, he finds that over much of the time from 1968 to 1977, New Zealand has shown small cyclical fluctuations in competitiveness with no consistent trend towards increased or decreased competitiveness.

"For example, the years 1975-6 exhibit a similar competitive position to 1962-3," he says.

There was a "considerable and uncharacteristic leap" in the New Zealand unit labour costs over for-

eign unit labour costs in 1977. But no long-term conclusions can be drawn from this one year's result.

When successive devaluations during the period 1968-77 are included in the calculations, "we find a rather different situation emerging, with a consistent upward trend in our export competitiveness since 1967, tempered only by a decline since mid-1978".

He notes that "the 1973-5 period afforded exporters a massive boost in their competitive position, although since then the lack of action to offset cost increases by suitable exchange rate policy has caused the position to deteriorate somewhat".

Taking the calendar year 1968 as a base — it was a year when the balance of payments was near zero with a \$1.3 million surplus — Grimes calculates that manufacturing exporters' cost competitiveness improved by 47 per cent between 1968 and 1976.

Even after the 1977 dip the increase was 35 per cent. To check the validity of his calculations, Grimes does the same exercise, comparing

wholesale price indexes for different countries. This method gave a 42 per cent increase in competitiveness from 1968 to 1976, and a 33 per cent increase between 1968 and 1977.

Why? Grimes turns to the fact that most of our exports have been in primary products. "The concept of cost competitiveness refers principally to the trade of manufactured goods and not to the trade of agricultural products which does not rely so heavily on movements in the relative international cost movements."

"Instead the relationship between New Zealand farm costs and the price received for our produce overseas provides the appropriate concept of competitiveness in this field."

Using a base point of 1968 (two relatively poor years), Grimes calculates that farm costs rose 14 per cent from then till 1977.

Over the same period import prices in New Zealand for terms rose by 156 per cent. Grimes calculates that foreign currency value of prices rose only 82 per cent.

Grimes says this shows the "exchange rate does during this period have been effective in maintaining in terms of trade despite its relative fall in foreign currency export prices".

In other words, "exchange rate policy has acted to effect changes in farm costs which changes in the New Zealand dollar prices of the country's agricultural exports".

Much the same result is achieved if the calculation is done using prices received by farmers and the foreign currency value of these returns.

In this case, prices received increased by 145 per cent compared with the 14 per cent increase in cost of the foreign currency value of 75 per cent.

"We can therefore conclude that New Zealand's exchange rate changes since the mid-1960s have acted, whether intentionally or not, to bring about a closer relationship between changes in farmers' returns with changes in their costs."

However, the depreciation required to allow the exchange rate to perform this equalisation role is a qualification to the agricultural exports to grow then the depreciation required to accommodate changes in the relative unit labour cost index.

This in turn accounts for the increased manufacturing competitiveness.

The corollary has been an increase in the volume of manufactured goods — taking advantage of the fact that foreign prices of our manufactured exports rose 50 per cent between a base period of 1962-6 and 1977, compared with a 115 per cent rise in the weighted foreign wholesale price index.

In other words, the foreign prices of New Zealand manufactured goods rose much more slowly than the prices on foreign markets of competing goods.

Grimes calculates also the manufacturing export position — measured as the ratio between New Zealand dollar prices for manufacturing exports and New Zealand unit labour costs — rose 5 per cent during the period.

Grimes then turns to the reason for our chronic balance of payments trouble since 1974. His conclusion is that the stagnation from the boom in exports in 1974 and 1975, when real imports went up 24.3 per cent and 22.8 per cent respectively.

## farmers' future finances

If, instead of those increases, there had been an increase of only 3.52 per cent — the average for the preceding years — there would have been a trade balance surplus of \$173.7 million in 1974, compared with an actual deficit of \$630.1 million, and a current account deficit of \$624.4 million, compared with the actual \$599.8 million deficit.

"Coupled with the increased trade surpluses for 1973, 1976 and 1977, our balance on merchandise trade since 1973 would have increased by a total of \$1581.3 million over the actual combined deficit of \$82.7 million," he says.

"New Zealand need not have suffered the severe balance of payments problems that it has suffered, had suitable domestic demand management policies or trade restrictions policies been applied to prevent the huge increases in imports in 1973 and 1974."

"The external problems that have been so severe since 1974 can largely be attributed to the massive level of real imports for these two years, although this has naturally been exacerbated by the disproportionate rise in oil prices that has led to a considerable downturn in the terms of trade."

He notes also the effect on invisibles of higher freight costs and increased travel payments.

"We can thus explain New Zealand's recent balance of payments problems largely from the payments side," he says.

"Our level of competitiveness in world markets has clearly not caused our external problems and may even have allowed us to cushion the shocks somewhat."

These considerations indicate the limitations on the effectiveness of the automatic exchange rate adjustment mechanism introduced in the Budget.

Too strict an adherence to that leg of exchange rate policy, in Grimes' view, would ineffectively account for the needs of farmers, structural changes in invisibles and changes in demand affecting imports.

If the automatic adjustment policy alone had been applied during the 1962-1976 period, it would have led to only a 116 per cent increase in farm gate prices compared with the 144 per cent increase in farm costs.

Grimes says this shows the "exchange rate does during this period have been effective in maintaining in terms of trade despite its relative fall in foreign currency export prices".

In other words, "exchange rate policy has acted to effect changes in farm costs which changes in the New Zealand dollar prices of the country's agricultural exports".

Much the same result is achieved if the calculation is done using prices received by farmers and the foreign currency value of these returns.

In this case, prices received increased by 145 per cent compared with the 14 per cent increase in cost of the foreign currency value of 75 per cent.

"We can therefore conclude that New Zealand's exchange rate changes since the mid-1960s have acted, whether intentionally or not, to bring about a closer relationship between changes in farmers' returns with changes in their costs."

However, the depreciation required to allow the exchange rate to perform this equalisation role is a qualification to the agricultural exports to grow then the depreciation required to accommodate changes in the relative unit labour cost index.

This in turn accounts for the increased manufacturing competitiveness.

The corollary has been an increase in the volume of manufactured goods — taking advantage of the fact that foreign prices of our manufactured exports rose 50 per cent between a base period of 1962-6 and 1977, compared with a 115 per cent rise in the weighted foreign wholesale price index.

In other words, the foreign prices of New Zealand manufactured goods rose much more slowly than the prices on foreign markets of competing goods.

Grimes calculates also the manufacturing export position — measured as the ratio between New Zealand dollar prices for manufacturing exports and New Zealand unit labour costs — rose 5 per cent during the period.

Grimes then turns to the reason for our chronic balance of payments trouble since 1974. His conclusion is that the stagnation from the boom in exports in 1974 and 1975, when real imports went up 24.3 per cent and 22.8 per cent respectively.

"As the agricultural sector still provides the major share of our exports we must ensure that its needs are not overlooked while we are emphasising the need to stimulate manufactured exports," Grimes says.

"Hence additional exchange rate changes to maintain farmers' terms of trade must remain a vital ingredient in future exchange rate setting procedures."

"In addition, structural factors such as adverse movements in the terms of trade, increasing foreign protectionism and increased debt burden must also be accounted for."

Grimes looks to the discretionary exchange rate changes mentioned in the Budget as a means of dealing with these factors and with the effects of the easing of import controls.

He also sees a need for co-ordination of demand management and trade policies to ensure that the management of the balance of payments does not get beyond the reach of other instruments.

"In the situation prevailing in 1973 and 1974, (when Grimes says there was a lax approach to demand management) it

EXPORT FARMING... role for discretionary adjustment.

would be unrealistic to expect that exchange rate changes could have countered the adverse balance of payments effects caused by the expansionary demand conditions within the domestic economy.

"When suitable demand management and trade policies are adopted, however, then exchange rate policy may be of considerable importance in managing the balance of payments."

"The exchange rate regime as announced in the 1979 Budget is a two-legged policy involving exchange rate

changes that cater for both relative purchasing power parity factors and for additional structural factors and it is this two-pronged approach to exchange rate setting that distinguishes the new policy from previous approaches.

"However, either one or other of the approaches by itself is insufficient when used as a guide to exchange rate setting and so it is vital that the practical exchange rate setting procedures 'walk' on both legs of the policy rather than attempt a prolonged 'hop' on only one leg."

## The Marlborough Selection A legend in the making.

In 1704, Sir John Churchill, the first Duke of Marlborough, was making history defeating the French armies at Blenheim.

His name and the scene of that famous battle are remembered in New Zealand by the naming of Blenheim and the Marlborough area.

The original town of Blenheim, near Germany's "Moella" wine growing district has, as if by destiny, proved to be more closely related than one would have ever imagined.

For, almost two hundred years later, an Italian Viticulturist called Bragato, declared that the South Island's Blenheim would provide possibly the finest wine growing opportunities in New Zealand.

It was decades later, in fact the early 1970's, that Montana planted their first vineyards in the Wairau.

Valley. And now the benefits of that development are here for all to appreciate — The Marlborough Selection.

A rising and a cabernet launch the selection. Vintage wines, that speak of the winemakers' skill and the generosity of mother nature.

The Wairau Valley — "hola in the sky". The hole that the sun shines through giving long hours of sunshine and warmth, late Autumn for grape picking and sweet grapes for the vintage.

The Marlborough Selection. Wines destined to make history — A legend in the making.

Share a legend.

## So you can really feel you've arrived.

Easing into the plush furnishing of Datsun's latest 260C Custom Deluxe, is like sliding behind the desk in the chief executive's suite. Or checking into the Penthouse at the Hilton. Everything is there, everything is just right, everything says you are a Very Important Person.

This is the kind of car you'll sit in for a while, before starting,

# Airline develops transport service sales tool

by Bob Stoll

ONE of the most sophisticated transport service sales tools yet developed is British Airways' Distribution Advisory Service.

Designed to promote air freighting of goods the basic principle has implications for everyone concerned about distribution costs.

Transport cost is only part of total distribution costs, and in some cases the cost of transport is less than the total cost.

Explaining this to transport users can be hard work, so the airline developed a computer programme which can be lapped via any telephone through a portable desk-top computer terminal.

The air freight salesman can call on a potential customer, get basic information from the customer, feed it into the computer via the portable terminal, and get back in seconds a series of detailed calculations. The airline expects these will show that by switching to air cargo the customer can reduce his costs. The customer has a form of

guarantee that the computer programme is not loaded in favour of air-freighting. If he takes the airline's advice and fails to achieve the promised savings, he can revert to his original transport method.

Use of this system is free and the airline guarantees to keep information supplied by the client company entirely confidential.

The basic information a customer is asked to provide concerns the type, value, weight and so on of the goods concerned, their origins and destination, packaging cost, current transport charges, and a quote for air transport. All information comes from the customer, not the airline.

The computer works out savings in inventory cost, in packaging and so on and then prints out a list of any goods which could benefit from air transport, and the savings to be realised.

In more detail, these groups of figures are needed to complete a survey of a client's distribution system.

TRANSPORT

A description of the commodity, its origin and destination, the unit of value to be used (dollars, pounds and so on), the weight unit (pounds, kilograms, and so on) and length (used for calculating warehouse density).

Gross annual sales to the named destination, average weight to value, number of orders a year, rate of customs import duty, duty type (FOB or CIF) and cost of capital per year are then fed into the computer.

Data covering current average consignee inventory, warehouse density density of

the product in weight per cubic space as stored in consignee's warehouse, warehouse cost, inventory tax rate (total public taxes on inventory) and inventory insurance rate.

Packaging cost, pick-up cost, freight tariff (the current tariff, usually sea) the delivery cost, miscellaneous charges such as storage or handling charges at the port of destination, door-to-door time, total lead time (time lapse between a consignee placing an order and receiving goods), safety stock (held to protect against delay or abnormal demand) and obsolescence rate (important for instance in the case of fashion goods).

The final data group covers transport insurance rate, transport insurance loss, insurance claim settlement time and non-insurance loss.

If transit time can be reduced, for instance, inventory costs and the capital cost of goods in transit can be reduced.

Because of the nature of air transport, less packaging is usually needed, breakage is fewer, and pilferage is reduced, and this is reflected in insurance rates.

Although air freight may cost more than sea, the total distribution cost may be lower. There are times when even the air freight cost alone can compete with sea freight. Sea transport charges by volume, air by weight (as a general rule). Items which have a large volume and a relatively high value can sometimes attract a lower rate by air than by sea.

What the customer sees coming out of the Distribution Advisory Service computer, first, is either a line saying air has no advantage or a printout typically reading: "In order to obtain the maximum possible savings from the use of air distribution all goods with a value-weight greater than \$x per pound should be sent by air."

Any marginal categories follow, plus a graph of comparative annual costs by value-weight.

The customer can request other information, such as a total cost summary by value-weight, total cost summary by cost item (showing estimated savings in packaging, insurance etc), a list of comparative stock levels, and so on.

The fact that the airline had to develop the system shows that many transport users don't think deeply about total distribution costs—or perhaps they don't know how to.

This might be understandable in the case of small firms, new to exporting, but several British firms—large by New Zealand standards—have used the Distribution Advisory Service and been surprised to find their distribution costs could be markedly reduced.

The same sort of approach can be used in other distribution systems. Any trained transport manager should be able to do similar sums to compare different forms of internal transport, competing transport services of this same mode and so on.

Fleet Owners and Financial Controllers.

## Is it really worth it to replace your vehicles before first renewing motors?

While new vehicle costs rise faster and faster, the component cost of motors tends to get less and less. This is changing the economics of fleet management. It is now a viable proposition to delay immediate vehicle renewal in favour of first engine replacement—with a unit reconditioned and guaranteed as-new by Engine Rebuilders Ltd.

See how cost increases in new vehicles go up faster and greater than cost of replacement motors. Example charted is a popular "Six", period 1974 to 1978.

Keep your vehicles and cut your costs

Are you replacing too soon? Analyse your fleet costs, especially upper mileage maintenance. Replacement with a new vehicle might in fact cost a lot more than maintenance would. Add the disadvantage of depreciation levels v. capital outlay, then ask yourself again. Is it really worth it to replace vehicles before first renewing motors?

ing of existing assets is imperative. This policy plainly saves money. It also promotes self-sufficiency of skills and provides employment opportunities.

New Zealand's leading experts in reconditioning

Engine Rebuilders Ltd offer a 24-hour exchange service on most popular makes and models. Japanese motors are serviced. We also do special orders e.g. Buick Rolls-Royce motors, Macks, Kenworths, etc.

Work is guaranteed to as-new factory standards—10,000 km/6 months. With its facilities and 16 branches, Engine Rebuilders Ltd has one of the world's most advanced engine recycling capabilities. Clutch and brake servicing is also undertaken.

## The whole story of the New Zealand computer industry

The 100 page Computer Book is the one and only annual survey and census of the New Zealand data processing industry. A section of in-depth feature covers topics like the small computer market and government policies towards computing and the employment situation in the data processing industry.

The Computer Book also includes a complete listing of all hardware and software suppliers, computer bureaux in New Zealand and an up-to-date census of all computer installations in the country. The Computer Book... only \$2.50 from Estate Periodicals, P.O. Box 9344, Wellington. Fourth Estate Subscription Service coupon in this issue.

# Tether tangle part of complex international web

by Rae Mazengarb

EVENTS which led to the winding up of R Tether (Insurance) Ltd are still murky and the situation is complicated.

Tether (Insurance) Ltd had claimed to have a binding authority with the Hong Kong General Insurance Co Ltd through its London agent.

Commodore's representative denied there was any such arrangement, and said Tether (Insurance) Ltd had authority to write business on behalf of Commodore for 14 months.

Frequency as well as must be considered, slowish daily service is cheaper than a rapid one.

British Airways takes care to get alongside company's transport when it is invited to give firm's transport distribution system and found it can save sums of money annually.

At the same time a risk of bringing in a lot of strife on those who have involved a first class distribution pattern.

So the aim is to get firm's transport management over and let him see much credit as possible than see him out on his own.

The airline is not going through the Distribution Advisory Service for a customer who has only a few parcels and is generally anyone who offers, say, 100 to 200 a year is probably worth effort.

The airline has a system in Australia, some 50 studies recently carried out. The identified some 200,000 year of potential air freight and the airline expects tonnes of that to be in the future.

That compares with tonnes moving at present. New Zealand firms can produce cargo data processed by airlines overseas.

Meanwhile for all users, internal or international, the philosophy of the Distribution Advisory Service offers food for thought.

In the Wellington area section of the third round, the Andrew King and Associates team of Hutt Valley rapidly expanded productive capacity in line with the buoyant conditions and was in a good position to survive the industrial troubles of the period.

Dr Jameson said: "In line with the sort of industrial problems that many companies have experienced recently, I decided it would make an interesting and highly relevant test of the teams' adaptability to see if they could cope with the situation where production capacity is suddenly reduced to one half of normal."

Most teams raised their prices substantially and made large profits as they sold their meagre stocks at very large margins in the under-supplied market. Unfortunately, some teams still over-marketed when virtually no marketing was required and have suffered a loss of "image" which reduces their possible orders in future periods.

The South Island battle of the accountants remains very closely fought with the lead alternating each period between the Dunedin team of Barr, Burgess and Stewart and a team from the Christchurch firm of Lawson, Leighton and Co.

With the large profits being made, further upsets to the present leaders are quite possible in the remaining three periods of round three. The winners of the round, who each win a zone final prize of \$1000, will be announced in National Business Review of the end of November, and they will go forward to contest the final for an additional prize of \$1000, provided by ICL, in early December.

The progress results in round three are:

TEAM	ACCUMULATED PROFIT IN \$000s
Game TA (Mainly Auckland teams)	
1 General Foods Ice Cream Division, Auckland	9754
2 MWD, Turangi	8837
3 Fletcher Brownhill, Auckland	8863
4 IDAPS Computer Science, Auckland	7871
5 Manukau Technical Institute	5743

The extent to which it was used either by the Ashby group, or by brokers placing reinsurance cover with it, now remains to emerge.

An article from The Financial Times "World Insurance Report" elaborates:

"The sequence of affairs that led to the syndicate's breaching its premium limits is understood to be as follows: "Primary producers passed

overseas business to their London correspondents, who in turn passed the business to Commodore Reinsurance (Management) Company Ltd in London (WIR 116). Commodore Reinsurance (Management) passed the business on to the Ashby syndicate through Furness-Houlder's binding authority. At a later stage Commodore Reinsurance (Management) acted in a reinsurance broking

capacity and passed the business onto Commodore General Insurance Company Ltd in Hong Kong. "But Furness-Houlder can only account for about 80,000 pounds of premium being put through its books: 77,000 pounds on Australian motor business and 300 pounds on Jewellers' block business. Furness-Houlder has suspended an employee while the matter is investigated

"Meanwhile, attention is likely to focus on the commercial arrangement of the syndicate, which has breached its premium limits through the use of this scheme, with Commodore Reinsurance (Management). Commodore Reinsurance (Management) is neither a United Kingdom authorised insurer nor a listed broker. It describes itself as a management service company."

## The TIMKEN Bearing Range is Available from N.Z.'s Largest Network of Bearing Service Centres

There's a BEARING SERVICE CENTRE at every branch of Motor Specialties Limited and Andrews and Beaven Limited, offering exceptional service for the supply of TIMKEN Taper Roller Bearings - RHP ball and roller bearings - and all associated products. 60 nationwide BEARING SERVICE CENTRES...thoroughly efficient...minimum delay...and a service that cannot be beaten. There's a Bearing Service Centre near you!

## EVERYONE PROMISES SERVICE. YOU CAN BELIEVE US!

Timken bearing range. The widest range of tapered roller bearings available from any single source means the right bearing for your job.

Australian made plus. Australian production of popular sizes plus access to our international network of manufacturing sources means assured supply. What's more, a Timken bearing component produced in one Timken Company plant will mate with a Timken bearing component from any other Timken Company plant.

Trained company sales and service engineers. Experienced, skilled Timken Company engineers offer you much more than just "price and delivery". They can assist you on all aspects of bearing engineering from product design through to handling, assembly and maintenance.

Timken bearing quality. Optimum bearing life results from our use of special carburizing grade bearing quality steels and world wide master gauge control.

Timken Company technology. Product research, development and application engineering are internationally dedicated towards constant improvement of a basic product—the Timken tapered roller bearing.

Ballarat, Victoria.

## Taking the bugs out of travel

THE last thing I wish to excite, in an article on health and travel, is a feeling of alarm in readers who wish to go abroad, or, through business, are forced to do so.

I outline the various possibilities of trouble to those who do not know of alien problems, just as I would advise a man to learn how to swim before he attempts to walk on the waters.

The chances of catching any of the diseases discussed, assuming always that the traveller moves in reasonable circles and in countries where public health measures are adequate, are very small.

But even the most luxurious hotel is not absolutely mosquito-proof, and the cleanest restaurant in the world is not impregnable to a bacterial invader lurking in an oyster or tinned food. And the precautions advocated are never as tiresome or painful as the

diseases against which they are aimed.

One such disease is typhoid fever. It can occur in the Arctic as well as in warmer climes, although the risk is higher in the latter areas, notably in countries bordering the Mediterranean which have been said to be the most polluted ocean in the world.

Although by no means as formidable as, say, malaria, typhoid is a very serious intestinal infection which can have a fatality rate as high as 10 per cent in cases inadequately treated; and even in those most properly treated, the mortality is upward of 2 per cent.

Unlike the majority of epidemic diseases, typhoid is contracted indirectly. It comes via such fomites as contaminated water, food and milk or from creatures like shellfish, or plants, such as water-cress which grows in water in which the responsible

bacteria have been deposited by infected sewage.

Although some epidemics can be traced to people actually suffering from the disease and handing food, or flies which have carried the organisms from excreta to food, many are never traced because the source is a symptom-free carrier.

The most famous carrier was "Typhoid Mary", an unfortunate Irishwoman who, over a period of several years in the early 20th century, slew several people and made many more very ill in various parts of the United States — she was deadly, for Mary was a cook.

A worrying aspect of the disease is its insidious onset. During week one, the patient may have no more than a headache, lassitude and general malaise accompanied by a fever that rises in steps. The pulse being notably slow, a mistake diagnosis of in-

The risk of catching some dangerous or discomfiting disease while abroad on business or pleasure can largely be overcome by taking sensible precautions. Dr David Carrick, discusses the ways a traveller can help himself to be safe rather than sorry.

fluenza might be forgivable. In some cases there are frequent nose-bleeds, signs that might register with a very alert doctor.

Week two sees a marked deterioration. The patient is most evidently very ill and may well exhibit a degree of mental confusion. Although the main site of invasion by the bacteria is in the intestines, constipation is more common than diarrhoea.

One sign is most significant — a rash of rose-red spots appears on the chest and abdomen. Even without laboratory help, the diagnosis should now be evident.

Week three may see improvement in mild cases, but the heavily infected person may deteriorate rapidly. And week four, during which the fortunate may begin to convalesce, the less lucky may succumb as the result of perforation of the bowel, internal haemorrhage,

pneumonia or heart-failure, the spread of the disease by the bloodstream may also lead to bones and joints being involved.

A majority of survivors never again experience the responsible germs, but a few like Typhoid Mary may go on doing so for years, spreading illness and causing deaths whilst they themselves enjoy perfect health.

Tracing down such innocent offenders is difficult. If found, they must be persuaded to undergo tests and treatment which is usually successful. But coaxing a perfectly fit individual to receive treatment for a disorder that in no way bothers him, is about as easy as preaching compassion for mice to a farmyard tomcat.

All this can be prevented by immunisation. TAB injections (given twice over four to six weeks) convey immunity for about three years. In some people these injections produce unpleasant reactions leading a day or two; but the Monovalent TAB, which covers typhoid but not paratyphoid A and B, injections are less troublesome in this respect.

But surely a stiff arm and a few hours of discomfort and malaise are preferable to contracting a disease that can kill, cause a lengthy and debilitating illness and even turn a few people into innocent poisoners.

Although not an epidemic disease, tetanus (lockjaw) is even more dangerous. With a worldwide distribution, the maledy can be obtained as easily in Bolton as in Bahrain. Caused by a saprophytic organism, which is much happier in dung and in the absence of oxygen, it can occur in man and other animals.

Penetrating wounds — lacerations from some thorns are ideal — are more dangerous than open cuts because, in the former, the organism is literally injected and, as the flesh closes behind, the perfect airless condition is created.

The poison produced leads to a dangerous illness in which exhausting fits may lead to death. The incubation period

depends upon the distance to entry point. If the disease is in the head or neck, symptoms may appear as early as two days after onset. But if the wound is in a foot, some 14 days may elapse before trouble begins.

Immunisation is by a vaccine. A total of three injections, the second within twelve weeks after the first and the third within six to twelve months of the second. In the days when horse-drawn transport was employed exclusively, very unpleasant and even dangerous reactions occurred in some people. The introduction of Humat, which uses human serum has greatly reduced the problem.

Far more common and much less dangerous yet extremely uncomfortable is "Gippy Tummy", or "Belly", or "Tokyo Trust", which can attack travellers anywhere in the world.

No high-powered business meeting can be carried out successfully if several members have to keep rushing out of the room irregularly and returning exhausted. And for holiday-makers to spend 50 per cent of the time in lavatories as tedious as it is wasteful — a bedroom one hardly sees in a food one cannot help.

Prevention is no more visible than putting up an umbrella before rain. A prescription drug, Septrin, taken only 2 tablets daily (two tablets three times daily for five days) is rapidly and astonishingly successful.

Such an easy method is and one that renders it otherwise a tedious holiday or erratic business trip pleasant and rewarding. Instead of expensively exhausting.

by Ben Furby

SELDOM can the Great Australian Clobbering Machine have had its taps turned on with the speed it was brought into action last month.

But then, it was frothing at the mouth, a great Australian Clobbering Machine. Australian beer.

Coming so soon after the Act was amended to allow the new low-alcohol beer, the plight of over-worked MPs can be imagined.

Meanwhile, Lindeman Holdings Ltd, which is importing the Kiwi beer, reportedly was delighted with the attention its beer was receiving.

The Steinlager is actually the same strength as that brewed and sold in NSW; some American method was used to

assess its alcohol content.

Applied to NSW products, this method would show them to be of the same strength. Any legislation against Steinlager would be ineffective.

To protect New South Walesmen from "hoose fit for a price", the NSW Government is reported to be about to amend its Pure Food Act to keep strong beer from Australian drinkers in NSW.

Every Sydney journalist invited could hardly resist the chance to try a strong brew, suitably chilled for the Australian taste, that could make a government reel.

What Stewart failed to take into account is that there are plenty of stronger drinks on the market.

Spirits and sherry have not been legislated against; nor has Coopers beer, which is readily available in liquor stores.

In the uninitiated, the appearance of this South Australian beer is enough to thrill with horror any party-goer who has seen the drink supply dwindle to the point where the host brings out his home brew.

The label on each bottle of Coopers warns the drinkers of the sediment, so that its murky, cloudy looks do not come as the surprise that "mud" in the bottom would normally cause when seen in a continental beer.

After the shock of the "mud" is overcome, Coopers turns out to be an excellent drink.

It is famous, too, for its ability to take diluting with ordinary water, which it assimilates without the effects such mixing would cause in any other beer.

The story of the protest about strong beer was juxtaposed in Saturday's Herald with a story of two cockatoos dolefully with a galah named Pinky.

The cockatoos are to be found a new roost, by order of the NSW Supreme Court, because they have offended neighbours, mornings and evenings by screaming incessantly: "Alma, I want a cup of tea!"

The cockies must go, the court ruled, but Pinky the galah may stay.

Mentioning a galah in the story next to the Minister who lost his roost over a Kiwi beer on allegations over its strength, while ignoring the strength of out-of-state beers and other stronger drinks, is appropriate to anyone familiar with Australian idiom.

## Powerful brew sends MPs reeling into action

## THE OLIVETTI ELECTRONIC. TYPING WILL NEVER BE THE SAME AGAIN.

It had to come. The machine that represents the most significant and influential advance in the history of typewriter technology. The Olivetti Electronic ET 221. So far advanced that the only realistic assessment of every other typewriter is said: "fashioned".

The Olivetti ET 221 has a host of the most advanced features. They help today's typist simplify her job, save her time, cut out boring, repetitive tasks and produce work of a superb quality.

Simply set the selector for normal print or automatic underline, bold type or underlined bold type. Even reverse printing is available. You can also type in any one of four European languages — French, German, Spanish, Italian — without changing the "daisy-wheel".

CHOICE OF STYLES

THE LIST GOES ON AND ON  
Automatic column layout... automatic paragraph indent... automatic justification of right margin... automatic carriage return... automatic paper positioning... automatic centering... automatic vertical lines... automatic page and indicator... plus an extraordinary list of features that make this machine a truly unique clickety-clack.

**TOTAL ENTRY CONTROL**  
Now you have total control over everything you type before it appears on paper. Thanks to the illuminated display panel just above the keyboard, it's supremely easy to check what is being typed before it is actually printed. You don't have to stop to change a single character or an entire line.

**EASY, ELECTRONIC CORRECTION**  
The ET 221 is equipped with an amazing "line memory". Not only can you check the line being currently typed in, and swiftly correct any errors, but you can also go back and alter characters, words and phrases already printed on the preceding line. Once the necessary corrections have been made, the ET 221 automatically returns to the point where you left off typing.

**MORE-STORE MEMORY**  
In addition to its 2-line memory, the ET 221 has a permanent memory capacity for over 500 characters for storing phrases and page numbers. You don't have to re-type all those phrases, dates and references needed in day-to-day correspondence. The

## A book whose time has come

This new 90 page stiff-covered annual supercedes the highly successful *Comparative Guide to the Performance of New Zealand Public Companies*. It incorporates the Guide and also provides a complete directory to money management in New Zealand.

At a time when borrowing and investment decisions have never been more complex, difficult and important *The Money Book* comprehensively covers borrowing (personal, business; interest rates/trends; credit and its use); investment (personal investment; stock and exchange v. fixed investment; gov't/local bond investment; inflation-proof investment).

*The Money Book* costs no more than the *Comparative Guide*... yet it provides so much more vital, up-to-the-moment information. Only \$7.50 at all good bookshops, or direct from the Fourth Estate Group, P.O. Box 384, Wellington. (See Fourth Estate Subscription Service coupon elsewhere in this issue.)

## Feltex Directors' Report 1979

H. G. CALLAM  
Chairman

The Directors have pleasure in submitting their Annual Report together with the Accounts of Feltex New Zealand Limited and its subsidiaries for the year ended 30 June 1979.

Salaries for the year advanced by 14% to a record \$227,249,000 and in consequence results for the period improved appreciably. After charging depreciation of \$4,775,000 (last year \$4,430,000) the results compare with the previous year as under:

	1979 \$000	1978 \$000
Operating Profit	14,776	6,130
Add Export Rebates	—	1,633
	14,776	7,763
Less Taxation	3,032	1,247
	11,746	6,516
Less Minority Interests	620	645
	10,926	5,871
Add Extraordinary Items	377	1,511
	11,303	7,382
Net Profit		

This year higher taxable profits more than offset tax claims relating to our export trading and accordingly there are no export rebates receivable as in the previous year. The Board is pleased to note the provision in the latest Budget to eliminate the "base" which prejudiced earlier exporters relative to new entrants. The extraordinary items as in the previous year comprise realised profits on property transactions.

**Consolidated Balance Sheet**  
Share capital increased during the year when the minority interest in Feltex Carpets (N.Z.) Limited was acquired from Carpets International Limited who accepted 1,900,000 shares at 50 cents each in Feltex New Zealand Limited. Carpets International were foundation shareholders in our carpet business and agreed to exchange shares in our subsidiary for an equivalent holding in the parent company so as to facilitate operations.

Term loans fell by \$4.6 million to \$40.6 million inclusive of repayment of overseas borrowings which have fallen from a peak of \$17.8 million in 1977 to \$11.0 million at year end. Funds employed increased by \$15.0 million largely for the purpose of supporting a 14% increase in sales.

**Fifty Years**  
While this is the 36th Annual Report of Feltex New Zealand Limited, 1979 marks the fiftieth year since operations were commenced in New Zealand by our former Australian parent company now known as Acmil Limited. These operations and further developments were subsequently consolidated by the incorporation of our present company in 1941. Since the year end the Company has entered into a joint operation with Acmil Limited to manufacture in New Zealand polystyrene products, adhesives, sealants and metal surface coatings. The joint venture Company is to be known as Actec Industries Limited.

**Distribution and Dividend**  
The Directors recommend payment of a final distribution of 10% making a total of 18% in respect of the year ended 30 June 1979 compared with 16% paid for the previous financial year. The payment will be made from the share premium account. Accordingly, for the 11th consecutive year New Zealand resident shareholders will receive a tax free distribution unless they elect otherwise.

**Directors**  
Mr. J.M. Carpenter, Chairman of Carpets International Limited and previously a Director of Feltex Carpets (N.Z.) Limited was appointed to the principal Board during the year.  
Mr. C.B. Phillips retired from the Board during the year following his transfer to Japan. He has capably represented B.F. Goodrich on the Board over two separate periods.  
Mr. A.L. McLean, formerly Deputy Chairman, retired on attaining the prescribed retirement age. He gave valuable service to the Company over a period of 13 years. His wise counsel will be missed. The vacancy created following Mr. McLean's retirement was filled by the Company's General Manager, Mr. H.M. Tiltar.

In accordance with the Articles of Association Messrs. Carpenter and Tiltar retire from office and offer themselves for election. Messrs. Callam and Ingram also retire by rotation and offer themselves for re-election.

**Auditors**  
The Auditors, Wilkinson Wilberforce, continue in office pursuant to the provisions of Section 163 (3) of the Companies Act 1955.

## development ill phobias

The article by Colin James in the 17th on the National Development Bill, is a curious mixture of phobias, and is prepared before the Bill was available for

the basic confusion in the article is exemplified by the statement that the Government "could if it chose to a pig sty in your

the first instance, the Bill would allow the Government to undertake any action in regard to your property if it contains no power to take it, or to require an owner to apply for

Even if you wanted it in your back yard, the Bill could not prevent that unless you could persuade the Government, with documentation made available to the public, that the property is essential for the purpose of a major expansion

the Planning Tribunal, that a public hearing of the local authorities, the Minister of Works, the Minister for the Environment, environmental questions and others, would be held. The project would not proceed, you could be told the possibility that the Minister-General sitting in the Cabinet might refuse to pass a law on the pig sty to be a

It is that event, your neighbours would have the opportunity to create a major public fracas, perhaps preventing the Opposition to the Bill from being changed.

Under the present law, of course the situation is different. If pig sties are not a permanent use, you will not be told to follow the tribunal but without so many

Parliament does not have to account to the public or Parliament, and need have no concern for public opinion. It commits some breach of the law, and neighbours are rendered powerless, even if the Government makes them to be in the

The correspondent states that the Minister's decision is "final". There is no appeal in the Bill of the Minister of the courts to the Minister — and delegated power is not reviewable by the courts in any event (except in circumstances only in relation to the recommendations of the tribunal, and this follows from the fact that the tribunal is not an advisory body, but has the power of final decision (The Jockey 1974).

The article then goes on to state the need for debate on economic and social issues, conceding that such issues are not appropriate for the Planning Tribunal to consider.

It seems that Mr James is two hundred years out of the on the one hand, social and economic work is undertaken which is essential to major expansion of the economy, development of the country, less patently

LETTERS

the debate and mangled to proceed much faster.

To top it off, your correspondent suggests that the existence of a National Development Act would somehow have prevented the detailed public debate on nuclear energy.

This is difficult to fathom. At no stage has either political party launched planning procedures for a nuclear power plant, or even come within cooee of establishing a site or design which could have been submitted to a local authority for a specified

The idea was floated in a power plan during the term of the Labour Government which referred the question to a committee of experts for study and report. In turn, the National Government established a Royal Commission to undertake a wide-ranging inquiry into the possibility that the National Development Bill.

The Commission duly reported, and its findings were accepted. Nuclear power is now a non-issue, at least for the remainder of this century.

Mr James' whole thesis is rendered invalid by his failure to appreciate that the proposed Bill will provide more public participation, more political accountability, more access to information and more emphasis on environmental planning. All that will be cut is the mind-sapping medium of endless red

It is Bill Undersecretary to the Minister of National Development

Welcome back  
Adam Smith

Recently Mr M McPhee, business news editor of the New Zealand Herald wrote an article which discussed the

way import controls were intended to reduce imports to an even lower level. True, by importing less this country will cut its trade deficit still further. But further import controls will result only in increasing unemployment, as happened when the same method was used in the great depression of the 1890s, because so much of New Zealand's, or indeed any country's, imports service re-

Mr McPhee quoted the Prime Minister as saying that blueprint planning is out-dated as soon as it is completed. New Zealand's present plethora of import and export controls, subsidies and incentives are a good example of such planning.

In his budget speech Mr Muldoon announced measures to bring more of the country's external trade under his direct control. More, not less, is to be subject to Treasury regulation.

The fault of such short-term planning is that any alteration of detail is overtaken by events as soon as it is completed.

There is another major reason why New Zealand finds it almost impossible to balance its overseas trade and currency transactions.

The Government must immediately de-nationalise the marketing of New Zealand's foreign exchange. Because of the comparative tiny size of the New Zealand foreign currency pool, a completely free trade in the New Zealand dollar could allow manipulation by much larger countries or even banks. This possibility would be prevented by the restriction in free trade to an internal market open only to New Zealand residents or registered individuals or companies.

From this denationalisation of the currency trade, three main results would follow.

(1) There would be an automatic financial balance. For every buyer, a seller would be needed. A net foreign investment would be possible provided the investor understood that later withdrawal of the investment would require repurchase of the foreign funds in the same market place.

It would still be possible for individuals, companies or the Government to borrow foreign currency to change on the internal market. The major stabilisation of the usual surges in prices for agricultural products would be covered. The various stabilisation bodies would keep their retained funds in the form of foreign currency in-

vestments until they were required to balance a temporary fall in product market prices. (2) As the public would immediately wish to purchase a great deal more from overseas than is now permitted, such buying pressure would cause the internal sale price of overseas currency to rise. The payments to the exporters provided they sell products in overseas currency, would rise in terms of the New Zealand dollar to a level which would encourage sufficient production to be allocated for export.

The recent devaluation shows the Government already aware of the importance of the comparative value of the New Zealand dollar. But the five percent devaluation is too small to be of more than temporary benefit. (3) As the other export incentives would be unnecessary, the Government would collect large amounts in taxes which are presently forgiven. This collection would have a major effect in reducing the internal deficit and so reduce inflation.

Our present economic state is one of dislocation of market forces. While repair may be health will be restored by the de-nationalisation of the foreign currency trade and New Zealand's future assured, as long as politicians resist the temptation to interfere and control. A partial repair has just been arbitrarily applied by the devaluation. The present time is the most opportune to allow market forces to settle the economy back into joint.

M J Sampson,  
Whangaparaoa.

## Order now and beat the rush.
